THE CALIFORNIA WELLNESS FOUNDATION 2001 ANNUAL REPORT

All images and quotes featured throughout this report represent the diverse populations served by the grantees of The California Wellness Foundation. We thank them all for their participation in the production of our annual report.
If there are two words that best sum up The California Wellness Foundation’s experience during fiscal year 2000-01, they would be “major transition.” During this 12-month period, the Foundation instituted a significant shift in our grant-making by moving away from our previous proactive, initiative style of grant-making to a more responsive approach, with at least half of our annual grant-making provided for core operating support.

The response to this shift has been overwhelmingly positive. Feedback from applicants, grantees and many philanthropic colleagues agree that the Foundation’s action to increase core operating grants for the nonprofit sector is needed. It is our hope that our commitment to this type of funding is filling a void among nonprofit organizations because the sector has been dealing, for some time, with shrinking government dollars and a large block of philanthropic funding largely devoted to innovative, new projects.

**The Year in Review: Grantmaking Program**

The Foundation completed its final year of operation under the Board of Director’s 1995 decision to concentrate its grantmaking over an extended period of time in five key areas: community health, population health improvement, teenage pregnancy prevention, violence prevention and work and health. We awarded 379 grants for $39 million, and the majority of our funding was dedicated to strategic initiatives within the five areas that represented coherent, integrated programs of grantmaking designed to focus resources intensively on an issue for a sufficient period of time to have a significant impact.
In recognition of the need to remain open to proposals from the community, the Foundation also accepts unsolicited requests for funding in each priority area that focuses on providing core operating support for direct-service organizations, and operates a Special Projects Fund that continues to allow us to respond to creative ideas and timely issues in areas, other than our priorities, that can affect the health of Californians.

Over this past year, there were many grantee achievements. One of our Special Projects Fund grantees, the PICO California Project, had success advocating for significant changes in the Healthy Families insurance program and an increase in the Expanded Access to Primary Care program.

The public policy grantees for the Foundation’s Violence Prevention Initiative played a key role in educating the California Legislature and the governor about the need to increase resources for violence prevention, resulting in a substantial increase for such programs in the state’s budget. The Teen Pregnancy Prevention Initiative’s public education campaign produced a report on access to contraception that helped inform providers about the reproductive health needs of teens.

The Work and Health Initiative’s Health Insurance Policy Program issued its fifth annual report titled “The State of Health Insurance in California” and presented its “Insuring the Uninsured” conference – both of which attracted a high-level policy audience in Sacramento.

Several grantees within the Children and Youth Community Health Initiative are establishing linkages with local policy officials, decision makers and key stakeholders. Elected officials are recognizing the community voice and perspective and incorporating it into their decision making.

Space does not permit us to mention all grantmaking activities, but we invite you to see the grants section for a comprehensive list of organizations and leaders.
Major Change in Our Grantmaking
Communicated to California Nonprofits

In May of 2001, the Foundation announced the launch of eight priority areas effective July 2001. They are diversity in the health professions, environmental health, healthy aging, mental health, teenage pregnancy prevention, violence prevention, women’s health and work and health.

A concerted effort by the Foundation to communicate these priority areas included disseminating a new brochure titled “Information for Grant Seekers,” redesigning and enhancing www.tcwf.org and proactively reaching out to new segments of California’s nonprofit world. Our goal was to communicate the new areas of funding and emphasis on core operating support to old and new audiences alike.

We will keep you posted on the response to our new style of grantmaking, which has already spawned a significant increase in the number of funding requests we typically receive.

Cover Story: Work and Health Initiative

Our tradition of providing an in-depth report on the work of grantees continues with this year’s annual report cover story, which is devoted to the Foundation’s five-year, $20 million Work and Health Initiative. Approved by the Board in January 1995, it completed its grantmaking period at the end of fiscal year 2001.

Our emphasis is now on funding core operating support.

There is a substantial body of research that connects work with health. The employed have better health status than the unemployed and at every income level health status improves. Therefore, the higher the salary and health benefits, the more likely workers are to enjoy good health. To address these health issues, the Foundation’s Work and Health Initiative had four distinct components complemented by an Initiative-wide evaluation. The following pages tell the stories of the people and institutions who were served by Foundation grantees that addressed work and health through the Initiative’s components: Computers In Our Future, the Health Insurance Policy Program, Winning New Jobs, and the Future of Work and Health. >
We hope you will find their stories, research and policy work informative. We believe that you will agree, as we have found through this grantmaking experience, that a good job is one of California’s best health promotion strategies.

Sincerely,

Barbara S. Marshall, R.N.

Finding and holding a job is not what it used to be. There was a time when most blue- and white-collar workers alike could find jobs that offered security, long-term prospects for professional advancement and generous benefits — chief among them, solid health coverage that provided peace of mind for employees and their families. But that era is now passing thanks to dramatic changes in our economy and a redefinition of our “contract” with employers. These shifts are having a profound effect on our workforce, most notably in the area of health.

Work influences health and wellness. Unemployment is linked to negative physical and mental health. Research indicates that a person’s health improves as his or her income level rises, yet access to higher-wage jobs is typically available to only the best educated and most skilled workers. The health of low-income workers often suffers not only because of physical hazards associated with their jobs, but also because they lack access to adequate health insurance and cannot afford quality health services for their families, which can help prevent serious illnesses.

There is no question that a good job is one of California’s best health promotion strategies. But changes in the workplace, such as increasing reliance on technology, jobs requiring higher education, and temporary and contract workers replacing staff personnel, contribute to the health status gap between the rich and poor. These changes make it harder for many to find good jobs that provide affordable health insurance, advancement potential and salaries that go beyond covering only basic needs like food, shelter and medical expenses, and also allow families to plan for their futures.>

“A good job is one of California’s best health promotion strategies.”
In 1995, The California Wellness Foundation committed $20 million over five years to its Work and Health Initiative. The Foundation provided this funding through four distinct programs of the Initiative, each component addressing central connections between work and health. These programs are Computers In Our Future, the Health Insurance Policy Program, the Future of Work and Health and Winning New Jobs. Funding was also given to Claremont Graduate University to evaluate the Initiative as a whole.

As a result of the Work and Health Initiative’s four program components, many changes are evident in the work and health arena. Eleven community-based technology centers across the state were funded and are now providing technological training to youth from low-income neighborhoods to help prepare them for higher-paying jobs that provide health insurance and other benefits. Several thousand unemployed individuals received skills training to help them find new jobs and prevent negative physical and mental health consequences. The need for reliable information among policymakers, health advocates and other stakeholders was addressed through an annual report on the quality and accessibility of health insurance in California — and through research regarding the changing nature of work and its impact on health and wellness.

We invite you to read the following pages, which bring to life the experiences of the Work and Health Initiative’s grantees and the people they serve.
Computers In Our Future
We live in a time when a computer can be found in nearly every type of workplace, from retail sales and delivery services to animation and architecture. Those with technology skills win — enjoying the prizes of better-quality jobs with health benefits. Toward this end, the Foundation funded 11 community-based technology centers to help approximately 25,000 low-income people develop computer skills as part of the Computers In Our Future (CIOF) component of the Foundation’s Work and Health Initiative.

The Happy Camp CIOF site of the Karuk Tribe of California is an example of how community technology centers can positively affect their communities.

Happy Camp, a small, isolated community of about 1,200 people, is located in the Klamath River Valley area of Siskiyou County. Its economy had depended on the timber industry until it collapsed in the early 1990s, prompting the community to search for new opportunities.

Once it received a CIOF grant, Happy Camp transformed the band room in the local high school into a technology center. The whole town started learning computer applications, and soon people from other towns were coming in to use the services. This prompted the opening of a second center 40 miles from the Happy Camp site. During the grant period, a third of the 4,000 people living in the Klamath River Valley area accessed CIOF computers and received technology education.

The CIOF sites provide an array of computer courses including word processing, desktop publishing, web design and computer maintenance. In addition to offering technology education, all sites have open-access periods, and most operate centers during day, evening and weekend hours to better meet the needs of the low-income families they serve.

The sites are different in many ways. Some centers began the four-year grant period with an existing computer center, while others started from scratch. All of the CIOF centers are located in culturally and geographically diverse, low-income communities where access to technology is limited. Sites range from urban centers such as the Women’s Economic Agenda Project in Oakland and BreakAway Technologies in South Los Angeles, both of which serve largely African-American and Latino families, and the Career Resources Development Center in the Tenderloin District of San Francisco, which serves primarily Chinese and Southeast Asian youth and young adults. This geographic diversity extends to agricultural communities, such as C.T. Learning in Fresno and the Central Union High School District in Imperial County near the Mexican border.

In mountainous Plumas County, where the local population is estimated at eight people per square mile, the local health services department identified the need for residents to have access to computers for skills training and health information.
“Residents are not only gaining skills that make them more competitive in the job market, but are also able to access needed health information that they previously had to drive miles to receive,” said Louise Steenkamp, executive director of the Plumas County Health Department’s CIOF site. “For example, people can use the computers to get information on where they can access nearby specialty care providers.”

All CIOF sites were challenged to focus primarily on getting young people preparing to enter the job market access to computers and technology training. Some sites had trouble attracting youth, while other sites surpassed their service goals. The centers most successful at reaching young people often hired youth from within the community as instructors and were nestled in community service organizations that were already serving young people.

“We serve many youth who have dropped out of school, are on probation or have been involved with gangs,” said Andrea Skorepa, executive director of Casa Familiar, the San Diego Housing Commission’s CIOF site. “They’ll come in to use the gym or meet friends and then they see the computers and are drawn to the technology. Soon they’re hooked! It’s great to see them develop job skills and advance towards healthier futures.”

When the CIOF model was created, the Foundation assumed the sites would use existing technology training curricula. However, many CIOF center users had never used a computer or a mouse, and the existing computer curricula were designed for more experienced users. Most sites developed their own curricula specific to the needs of their target population.

“We wrote our own curriculum so that it would be youth-focused and appropriate for low-literacy levels,” said Rev. Jeff Carr, executive director of Bresee Foundation, a faith-based, multiservice CIOF site located in the most densely populated, high-poverty area of Los Angeles.

Some sites, such as Santa Barbara City College, saw the need to provide bilingual computer applications instruction.
“We knew we had to offer computer skills workshops in Spanish to serve our local families — many of whom depend on tourism and other seasonal work,” said José Martinez, director of the Santa Barbara City College CIOF site. “We saw the need for technology skills training that could lead to a wider range of job prospects and better educational opportunities.”

As part of Claremont Graduate University’s evaluation of the Foundation’s Work and Health Initiative, all sites were required to collect data related to the age, gender and ethnicity of center users, as well as data on services accessed. Program staff at many sites had little experience in participating in an evaluation and found it difficult to find time to fill out the necessary forms amid their regular service-provider responsibilities. However, once grantees saw how valuable evaluation data were for informing programmatic decision making and fundraising, they became more enthusiastic partners with the evaluation team.

In addition to running the CIOF centers and collecting evaluation data, grantees were challenged to become a technology resource within their communities and a voice for public policies that support technology and training in low-income communities.

“This model presented many challenges — getting community-accessible sites, developing curriculum, collecting evaluation data, placing participants in jobs, developing our policy advocacy skills,” said Richard Chabrán, director of the University of California, Riverside’s CIOF site. “Doing all this at once while teaching people how to use technology made for a very rich experience. If it had not been designed this way, we would not have learned as much.”

Before the CIOF program was implemented at Happy Camp, less than 10 percent of its residents had computers; now more than 70 percent have computers. None of the elementary or high schools had training in technology; now they all offer it and are integrating computers in classrooms with technology training provided to teachers.

Prior to the CIOF program, most business and community service organizations did not use computers; now they are all computerized. The few businesses that were computerized used to send their staff miles away to Redding to receive technology training; now the CIOF staff provides the training in town, saving businesses money and allowing them to expand professional development opportunities to more employees.

“Our community is healthier as a result of this project,” said Michael Trombetta, director of the Karuk Tribe’s Happy Camp Computer Center. “People have healthier attitudes and increased self-worth. More people are working, and more of our young people are seeking higher education. I love being part of something of such significance to our community.”
Given the complexity of the CIOF model, the Foundation provided funding for technical assistance to all 11 sites. Community Partners served as lead agency for a program coordination team that included The Children’s Partnership and CompuMentor, which provided the sites with focused training and ongoing support on a wide range of topics including building organizational capacity, management, technology logistics, developing corporate partnerships, public policy advocacy and sustainability. The support that the program coordination team provided included raising $1.6 million in cash and in-kind corporate support for the 11 sites.

Community Partners was also charged with statewide coordination of the CIOF component.

“CIOF center leaders quickly saw the value in a statewide network of all 11 sites,” said Linda Fowells, vice president of programs and public affairs of Community Partners. “Our semiannual conferences helped foster this and allowed grantees to share lessons learned and even develop joint fundraising strategies.”

The CIOF network is sustaining its work since the grant period ended and has been successful in a number of its joint fundraising efforts — among them, a grant of $700,000 from the Governor’s Workforce Investment Act discretionary fund.

CIOF demonstrated that with financial and technical support, centers could not only provide needed computer skills training to those previously unreachsed, but they could also benefit their communities as advocates for policies that support technology access for the underserved and develop into local technology experts.
HIPP

Health Insurance Policy Program
Research indicates that individuals with medical insurance enjoy better health than those without it. Unfortunately, in California more than 6.8 million residents lack health insurance coverage.

Efforts to expand access to health insurance need to involve a wide range of people including health-care providers, employers, consumers, news media professionals, educators, policymakers and researchers. All of these constituents need up-to-date and accurate information to help them determine the most effective strategies to increase the number of insured people in the workforce.
The Foundation funded the Health Insurance Policy Program (HIPP) of the Work and Health Initiative to educate policymakers and opinion leaders about the availability, costs and quality of the state’s employer-sponsored health insurance, and to help inform policies designed to increase the number of residents who have health coverage. The HIPP achieved this through three goals: disseminating an annual report, supporting efforts to expand Californians’ access to health insurance and sponsoring an annual conference for policymakers and advocates.

The HIPP annual report was jointly developed and disseminated by the Center for Health and Public Policy Studies at UC Berkeley, under the direction of Helen H. Schauffler, and the UCLA Center for Health Policy Research, under the direction of E. Richard Brown, to inform decision makers regarding the state of health insurance in California. Team members developed policy briefs and related publications for broad dissemination to inform policymakers, the media and the public. They also provided recommendations for policies to expand health insurance availability.

Over the HIPP’s five-year grant period, the annual report on health insurance coverage in California has filled a niche for health insurance data. The data are considered credible and reliable, and the report is viewed as a resource by legislators, health policy advocates, the media and others. >
The process of developing the annual report has had its challenges. Most notably, it was difficult to generate significant traction in Sacramento when the governor had not made the issue of health insurance a high priority. Nonetheless, a significant number of legislative proposals were informed by data from HIPP and other Work and Health Initiative convenings.

“HIPP provides valuable information to legislators and advocacy groups, who use the data to promote policies aimed at raising awareness about the status of health insurance in California,” Brown said. “Good data should lead to good policy decisions.”

In addition to funding research to define the scope and nature of the insurance problem, HIPP funded a grant to the Center for Governmental Studies for the Insure the Uninsured Program to support action-oriented strategies to expand access to health insurance. Through workgroups and annual conferences, a forum was provided for health care leaders to develop, discuss and disseminate solutions to increase coverage for the uninsured. This was the only statewide conference that brought health policy and community advocates together with institutional representatives, academicians, legislative staff and government department heads to discuss the issue of the uninsured.

“There are many stakeholders and interests involved in addressing the issue of the uninsured,” said Lucien Wulsin, project director of the Insure the Uninsured Program. “HIPP has taken an appropriate position by focusing on getting information into the hands of people who are creating solutions.”

promote policies
Future of Work & Health
While common sense may tell us there is a connection between work and health, research and data related to this area are scarce. To address this lack of information, the Foundation funded the research-focused Future of Work and Health component of the Work and Health Initiative. This component seeks to understand the rapidly changing nature of work and its effect on the health of Californians. 

Future of Work & Health

3...
“People who care very much about health in California work in silos, independently. There is enormous benefit in introducing folks who work in health and those in workforce and economic issues. We need to build connections.”

Steve Levy, Institute of Regional and Urban Studies
Director and Senior Economist

The Institute of Regional and Urban Studies (IRUS) received a Foundation grant to help focus the research. A diverse panel representing economists, business people, labor leaders and public health professionals determined that the research should concentrate on three areas: getting left behind by a changing economy; a widening of income inequality; and the changing “contract” between employer and employees.

“Our discussion enabled us to see the linkages between the economy and how it affects the workplace and the health of those employed — or not employed,” said Steve Levy, IRUS director and senior economist. “It opened up the idea that those who care about health should also care about good jobs.”

To begin gathering a body of data in this area, the Foundation funded the Institute for Health Policy Studies at the University of California, San Francisco, to design and conduct a three-year longitudinal survey of a representative sample of Californians to better understand important work and health connections.

“Because of the longitudinal nature of the survey, we’ve been able to describe some of the profound changes in the employment picture and the impact work has on health, some of the implications for families, and what happens to health when people lose jobs,” said Ed Yelin, principal investigator.

Source: Institute for Health Policy Studies, September 2000
Results of the California Work and Health Survey were released on Labor Day each year, 1998 through 2000, and received significant statewide media coverage.

TCWF awarded eight additional small research grants to explore relationships between work and health on specific groups of Californians, such as the over-50 population and low-income ethnic communities.

One such grant was awarded to the California Institute for Rural Health Management, which studied the unique economic environment of California’s disparate rural communities — where unemployment rates are almost double those of urban areas.

“Overall, in rural areas, regardless of the types of businesses, there are fewer well-paid jobs and not much upward mobility,” said Luisa Buada, former executive director of the institute. “These factors lead to inadequate or no health insurance and lack of a living wage, which together affect health more than anything.”

Researchers from all areas of the Future of Work and Health component convened several times throughout the grant period to highlight their findings and to understand commonalities across diverse disciplines.

Researchers have established clear links between economics and health. We have learned that higher incomes are linked to longer life expectancies and that people who live in low-income, underserved communities tend to live shorter lives. Through the work of these grantees, the Foundation has facilitated bringing people together to begin talking about how to improve work and working conditions for the health of all Californians.
Winning New Jobs
Research shows that job loss and unemployment are associated with increased incidences of depression and unhealthy behaviors such as substance abuse, poor diet and lack of physical exercise. This creates a vicious circle, since people who experience poor mental or physical health are more likely to remain unemployed.

Mindful of these findings, the Work and Health Initiative incorporated a program that helps those who’ve lost their jobs acquire the skills to buffer them against negative mental and physical problems and become reemployed. The program, Winning New Jobs (WNJ), is the California implementation of a model originally developed by the University of Michigan’s Prevention Research Center. >
Participants diverse in age and ethnicity accessed the WNJ program from three sites throughout the state: NOVA in the Silicon Valley; Proteus, Inc., in Fresno; and the Los Angeles County Office of Education (LACOE). The Manpower Demonstration Research Corporation (MDRC) provided site and conference coordination and technical assistance services.

“The sites usually rely on funding streams that allow them to serve people who meet specific eligibility requirements, like welfare recipients, or the length of time of their unemployment,” said Sharon Rowser of MDRC. “WNJ gave them the opportunity to serve those they used to have to turn away.”

The WNJ program is typically implemented as a five-day series of four-hour interactive workshops. Participants aren’t lectured to — rather, they are encouraged to discover their own solutions. Job seekers learn how to think from an employer’s point of view through participation in role-plays and other experiential exercises.

“We found that those who’d been unemployed longer often had marketable skills but needed help in selling themselves during the interview process — WNJ addressed this issue,” said Judith Gentry of NOVA.
Although WNJ was designed during a recession and implemented during a boom economy, the sites were able to surmount recruitment obstacles and meet service goals, providing 455 WNJ workshops to 5,290 unemployed Californians. Participants were unemployed for an average of 14 months before enrolling in WNJ — considerably longer than the two months of unemployment typical of the original Michigan group. Nonetheless, comparable percentages of Californians found work echoing the Michigan studies. Thirty days after the workshop, 36 percent of California participants had found work, a number that increased to 65 percent by six months. Of those, 61 percent were in their chosen occupations and employed in full-time positions with health benefits.

“The program demonstrated positive impacts on people whether or not they became employed right away,” said Richard H. Price of the Michigan Prevention Research Center, who helped create the model and subcontracted to the MDRC to provide training to WNJ program facilitators. “Yes, they got better jobs, but outcomes indicate that they also prevented the deterioration of their mental health.”

One of the three WNJ sites, Proteus, Inc. — a community-based, multiservice organization — has integrated the program into their permanent service “menu.” LACOE and NOVA faced challenges in sustaining the program, largely because of changes in key public funding sources that represented their primary means of support.

“We have made the program a continuing part of our services now,” said Andrew Candidate, group facilitator at Proteus. “When we started, we offered it at one of our sites in the Fresno area. Now we provide it at 10 [sites].”

The MDRC helped disseminate the WNJ model through conference presentations, a brochure and videotape. These efforts resulted in 14 additional sites being trained to deliver the WNJ program, of which five are actively running WNJ workshops. Apart from the 14 sites, 10 organizations that partnered with the three original sites are also conducting the WNJ workshops.

“My concept of how work affects health has changed tremendously — most notably, how the emotional stress of unemployment affects mental health,” said David McElwain of LACOE. “It’s made me realize how important it is to have community-based mental health services readily available.”
The Foundation makes grants within eight priority areas and a Special Projects Fund. We encourage requests for core operating support, but requests for project funding are also welcome. Core operating support can be used to help underwrite the regular, ongoing health promotion and disease prevention activities of your organization. Such funds can also be used to strengthen organizational infrastructure through activities such as providing salaries for key administrative staff, covering operating expenses, engaging in strategic planning or facilitating board development.

Each priority area and the Special Projects Fund are described in the following pages.

APPLICATION PROCESS
To present The California Wellness Foundation with a grant request, an organization should first write a one- to two-page letter of interest that describes the organization’s mission and activities, the region and population(s) served, how the funds will be used and the total funds requested. If requesting project funding, please include project goals, leadership and duration. Your letter will be processed most accurately if you clearly designate the priority area through which you want your request considered for funding. No application form is needed, and formal proposals are not accepted at this preliminary stage.

Foundation staff will review letters of interest on an ongoing basis and notify prospective applicants of the results normally within three to four months. Those encouraged to submit a proposal will receive further guidance at that time.

ELIGIBILITY CRITERIA
With rare exception, the Foundation funds nonprofit organizations that are exempt under Section 501(c)(3) of the Internal Revenue Code and are deemed as “not a private foundation” under Section 509(a). The Foundation also funds government agencies.

Grants are not generally awarded for annual fund drives, building campaigns, major equipment or biomedical research. Activities that exclusively benefit the members of sectarian or religious organizations are not considered.

Letters of interest should be directed to:
Director of Grants Administration
The California Wellness Foundation
6320 Canoga Avenue, Suite 1700
Woodland Hills, CA 91367
Diversity in the Health Professions
The goal of this priority area is to support multiple strategies to increase diversity in the health professions in California. Grants are commonly given to organizations that provide pipeline programs, scholarships, mentoring programs, internships and fellowships that support and advance career opportunities for people of color in the health professions, including allied health and public health professions. Organizations that support people of color in the health professions through strategic partnerships, leadership development, continuing education and networking activities are also eligible for funding. In addition, the Foundation funds organizations that educate policymakers about public and institutional policies that promote diversity in the health professions.

Environmental Health
The goal of this priority area is to support and strengthen organizations working to alleviate the disproportionate health costs of environmental hazards for children and low-income communities of color. Grants are commonly given to organizations that provide environmental health education and awareness activities, community organizing to promote environmental health, screening and testing for environmental health exposure, leadership development, and partnerships between public health departments and community-based health programs to improve environmental health. The Foundation also funds efforts to inform policymakers and advocate for policies that could improve environmental health among underserved populations.

Healthy Aging
The goal of this priority area is to support and strengthen organizations that improve functional independence and the quality of healthy years of life among older Californians. Grants are commonly given to organizations that provide clinical preventive services, leadership development, recreation programs, food and nutrition services, consumer education, adult immunizations, family caregiving and chronic disease management. Also funded are organizations that support relationships between youth and older adults through activities such as intergenerational volunteering and mentoring. In addition, the Foundation funds agencies that educate policymakers about issues such as prescription drugs, family caregiving, employment, elder abuse and appropriate and affordable housing for the elderly.
Mental Health
The goal of this priority area is to support and strengthen existing mental health organizations, increase visibility for the field of mental health, expand knowledge about effective services and decrease stigma. Grants are commonly given to organizations that provide primary and secondary prevention services for older teens transitioning to adulthood, with a focus on those in foster care, the juvenile justice system and runaway/homeless youth. Services for other underserved populations, such as homeless adults and immigrants, are funded as well. In addition, the Foundation funds organizations that provide leadership development programs for mental health professionals, increase public awareness of mental health issues and advocate for policies that promote mental health.

Teenage Pregnancy Prevention
The goal of this priority area is to support and strengthen organizations that work to decrease rates of teen pregnancy and promote healthy adolescent sexuality. Grants are commonly given to organizations that provide outreach activities for reproductive health care, comprehensive sexuality education, access to contraception, education and counseling about contraception, comprehensive programs for pregnant teens, peer counseling programs and male–involvement programs. An emphasis is placed on funding organizations that work with high-risk, sexually active, underserved teen populations. The Foundation also provides grants to organizations that provide leadership development activities for reproductive health care workers and to organizations that inform policymakers and opinion leaders about effective policies and programs to prevent teen pregnancy.

Violence Prevention
The goal of this priority area is to support and strengthen organizations that work to prevent violence against youth. An emphasis is placed on grants to organizations that provide mentoring programs for youth, community-based conflict resolution programs, domestic violence prevention, peer mediation, after-school programs and school-based violence prevention programs. Grants are also made to organizations that provide leadership development activities for violence prevention workers. In addition, the Foundation funds organizations that inform policymakers and advocate for public policies that increase resources for programs that prevent violence against youth and that reduce injury and death by firearms. >
Women’s Health
The goal of this priority area is to support and strengthen organizations that work to improve access to women-centered, culturally appropriate health care and increase the active involvement of women in the health policy arena. Grants are commonly given to organizations that provide clinical services, screenings, prenatal care, mobile health care, self-help groups, community health education and related services. Priority is given to organizations that create welcoming environments for women and girls in underserved communities. The Foundation also funds organizations that involve women in leadership development, policy advocacy and community mobilization around women’s health issues.

Work and Health
The goal of this priority area is to support and strengthen organizations that work to improve the health of vulnerable working populations and the unemployed. Grants are commonly given to organizations that increase workers’ access to preventive health care, help prevent workplace injuries and illnesses and provide worksite health promotion programs. Organizations that provide technology training to help low-income youth obtain employment and its corresponding health benefits are also funded. In addition, the Foundation funds organizations that provide leadership development programs focused on the health of workers. Organizations that educate policymakers about the connections between work and health and promote policies that would improve the health of low-income workers are funded as well.

Special Projects Fund
Each year, the Foundation sets aside a pool of dollars to respond in a timely fashion to opportunities that fit the Foundation’s mission but are outside the eight established priority areas. Of particular interest are proposals to help California communities deal effectively with the health impact of the shift of federal responsibilities for health and human services to state and local levels. The Foundation has made grants to strengthen safety net providers of preventive care, to help low-income consumers understand and navigate changes in the health care system, and to inform public decision making through policy analysis and advocacy. Examples of other areas funded over the past few years include border health, HIV/AIDS prevention, rural health and partnerships with government agencies and other foundations to improve the health of Californians.
Selected Grants 2000-2001
The following grants were made during fiscal year 2000-2001. These grants may not be indicative of the grants the Foundation will make in the future. Please see page 29 for the current application guidelines or visit our website at http://www.tcwf.org.
