President’s Message

From the 2005 Robert Wood Johnson Foundation Annual Report

Risa Lavizzo-Mourey, M.D., M.B.A.
President and Chief Executive Officer
A TREE IN THE STORM: Philanthropy and the Health of the Public

Even now, after so many painful months, I am haunted by memories of my visit early last fall to a makeshift shelter in what was left of Gulfport, Miss., in the aftermath of Hurricane Katrina. The shelter was in a still-standing church hall near what once had been the boulevard along the beach. Row after row of canvas cots inches apart were the only home for about 125 people—parents and their children, the elderly, and the mentally ill. Many seemed overwhelmed by their struggles.

One old, old man lay curled on his cot, all alone at midday, sheets pulled over his head, seemingly lost and most likely forgotten. Was he a father? Maybe a grandfather? What had happened to him? To his home, his job? Was he wounded or sick or scared? Where was his family?

A few steps away a little girl sat pressed against the concrete corner wall clutching a pink comforter, a pile of stuffed animals and an old pillow pulled close around her. It might have been a snuggly corner of any American girl's room. But it wasn't.

No, this was a catastrophe's wasteland and we were there as part of a group of foundation leaders being guided through the area by leaders of the American Red Cross.

Nothing I saw on TV or heard on the news prepared me for the reality on the ground. The rawness of the human and physical destruction literally took my breath away. Standing in the middle of a street that was more like a ragged path bulldozed through the rubble, I prayed that the odor of rotting flesh came only from dead fish and birds.

Even to this physician, it was disorienting and a little frightening. After all, here I was, representing the largest philanthropy in the world dedicated solely to improving the health and health care of our most vulnerable people, yet when faced up close with such immediate need I wasn't even sure of my role or what I could do. Should I roll up my sleeves or roll out my checkbook?

Slow down, Risa, I told myself. Our job is to look and listen and learn. Remember that Katrina was about more than wind and water, rubble and ruin. This was a genuine cataclysm that shredded social, economic and health care infrastructures right along with the power and water systems. Hardest hit were the disadvantaged and disowned, many of them racial minorities, the very same people who were a priority for our philanthropy's founder even before there was a foundation that bore his name.

What I needed was a snapshot of this post-Katrina landscape that I could take back to Princeton and apply to the bigger picture of what needs to be done to improve the practice of public health, the health of our communities, and the provision of health care in general.

THE BEST TIME TO PLANT A TREE IS TWENTY YEARS AGO.

THE SECOND BEST TIME IS NOW.

- African Proverb
My first primary indicator was the state of the health care available to Katrina's survivors. Fortunately, despite the lack of water, sewers and power, the most serious medical and health problems had already been addressed. The injured and diseased were airlifted out early. Nurses and medics remained on-site.

Mental health professionals were the ones with the toughest jobs. Horrifyingly, some infants had been swept away in the storm surge. For their parents the grief was more catastrophic than the storm itself. One mental health worker told me that the stress of helping people deal with such tremendous loss was almost too much to bear.

Plenty of rescue and recovery teams, most from the private sector, were meeting other nonmedical needs. Local residents could sign up for food stamps and financial assistance over at the local movie theater. Scores of young people from all over the country were preparing food, giving people rides, doing the heavy physical lifting—and with great contagious spirit, too.

One Baptist church’s feeding station was dishing up 5,000 daily servings of meals like spaghetti, canned corn and Oreos. Pickup trucks and commandeered ambulances cruised beat-up neighborhoods, unloading Styrofoam containers of hot meals and cases of bottled water.

So far, so good, I thought—but not for long.

Our little tour group stood out a bit too much. We were visitors from an outside world untouched by the disaster. Many of us were neatly dressed in business casual attire. Some wore shirts with relief agency logos. We looked cleaned up and official enough to draw lots of attention.

As we headed toward a meal tent for lunch, an elderly man with a handful of forms and papers approached asking, “Help me.” He’d just driven the 80 battered miles from New Orleans where he’d heard that relief agencies in Mississippi would give him food stamps and a check.

Someone in our party had to tell him he was on a wild goose chase, that financial assistance wasn’t available for him here and he had to make the drive back home—if he still had one.

We expected an angry reaction. Instead we saw resignation. Saying nothing, he lowered his head and simply walked away in a wordless act of dejection that has troubled me ever since.

That night, flying back north out of the Gulfport-Biloxi airport, I thought back to those two aged men, so late in their lives, and
to that little girl, so early in hers. They were living metaphors for a society that had failed to care for its own, and for human expectations that were dashed.

THEY TAUGHT ME TWO BIG LESSONS THAT DAY:

Lesson Number One – In America, most people presume that a certain level of publicly provided care and caring is available to them and they don’t worry particularly about who furnishes it or where it comes from. They take it for granted that government will secure their safety and protect their health when it needs to. But when that expectation is not met, many of our most defenseless people are so beaten down and so far beyond anger that they literally and figuratively pull the sheets over their heads and give up.

Lesson Number Two – Katrina exposed the unforgiving and long-avoided truth that mainstream America fails to regard huge numbers of our poorest, oldest, sickest, dispossessed, nonwhite people and their families as equal members of our society.

If you have any doubt that we are defaulting to a two-tier society of haves and have-nots, just think of those amazing pictures of the lost and forgotten of New Orleans huddled on rooftops, waving crude signs that pleaded “Help Us,” and calling out for food and water that did not come. To me, this helps explain lesson number one.

These are harsh truths that we’ll be struggling with as a society for a long time and with great discomfort as the images of all that Katrina laid bare come into sharper focus and we realize that what we see for certain is ourselves.

It is not a pretty picture. This disaster forces us to come to terms with the depth and breadth of an entrenched inequality that spreads disadvantage and unfairness through every sector and segment of life in America, from housing and transportation to education and jobs, public safety and personal security, access to health care and the equality of the care delivered.

It especially hits home for us in public health because the mission of the Robert Wood Johnson Foundation is to improve the health and health care of all Americans.

We may not be able to fix the broken levees, restore ruined cities, house the homeless or feed the hungry. That’s not our job. But we most certainly can apply Katrina’s lessons to the wide range of good work that we support—to develop the quality of health care and strengthen the public health system.

This always has been a tough task because the traditional public health “system” is not really a system at all but a maze of thousands of local health agencies, hospitals, civic and faith-based groups, community and business organizations, a huge army of volunteers, state health and emergency management departments, the massive Centers for Disease Control, and,

THE MISSION OF THE ROBERT WOOD JOHNSON FOUNDATION IS TO IMPROVE THE HEALTH AND HEALTH CARE OF ALL AMERICANS.
since 9/11, a parallel and occasionally colliding universe of state and federal homeland security bureaucracies and budgets.

One might hope to make a coherent organization chart out of all these entities but even the dotted lines break apart because there is no sure way out of the maze. In fact, for most of the past 20 years political leaders and budget- and policy-makers at all levels failed to heed successively strong and explicit alerts that the whole multilayered contrivance is in bad shape.

The Institute of Medicine (IOM) repeatedly has warned us in blunt and unequivocal terms that this crazy-quilt system is “in disarray” and in need of a major overhaul. The IOM tells us that:

- The system is not “prepared to respond to new crises or emergent health problems.”
- The infrastructure is weakened by years of political neglect.
- Competent and professional leaders are in short supply.
- The workforce is insufficient and inadequately trained.
- Local and state laws are outdated and dysfunctional.
- Funding is second-rate and often comes with so many strings attached that it’s all but useless.
- Information systems and technologies are antiquated and vulnerable to failure and intrusion.
- Communications networks are ineffective and fragmented.
- Laboratories are obsolete and lack surge capacity.
- Disease surveillance and epidemiological systems lack integration and can’t deliver a real-time picture of imminent threat.
- Public and private sectors rarely collaborate over shared objectives.

This isn’t just an inventory of complaints. It is an indictment of how local, state and federal political leaders so dangerously neglected to protect the public’s health for so many years that the “system” became as badly compromised as the Mississippi Delta’s floodwalls and levees.

How did America let such a vital line of domestic defense become so weakened? I would suggest that public lack of awareness and chronic political disregard conspired over time to keep public health out of the public spotlight and off the decision-makers’ radar screens.

The result is a formula for certain failure: Local and state public health officials are expected to perform as superheroes in the face of rising threats, withheld resources, political mistreatment and too much uninformed second-guessing.

At the same time public health officials are accountable to a public that may not know they exist and to political leaders who ignore or overlook their repeated requests for critically needed funding and systems improvements.
For more than a decade the Foundation has concentrated on building up the public health infrastructure, modernizing the system’s information technologies and developing a new, savvy cadre of leaders.

In pre-Katrina terms, progress has been good. Our more progressive partners have revamped outdated state and local public health laws. They are fighting—and winning—budget battles they previously lost. They are comfortable with high technology and information management systems. And they are remarkably better connected to key partners in the business, faith and civic arenas.

The one sector that still seems out of the loop is the public itself, even though every person in America has a stake in public health. It amazes me that in our age of hyperinformation most people can be so ill-informed about how the public health field protects and promotes their own good health and that of their families and neighbors.

I saw one survey in which more than nine out of 10 respondents could not come up with an answer when asked, “What do the words ‘public health’ mean to you?” Less than 4 percent knew about health education, preventing infectious diseases, immunizations, healthier lifestyles.

In another poll nearly 60 percent of registered voters didn’t have a clue how the so-called public health system “protects the population from disease” and “promotes healthy living conditions for everyone.”

Nevertheless, without hesitation the great majority said that funding public health was more important than building roads or cutting taxes. In other words, they may not know exactly what the public health services are or do, but they intuitively understand their importance.

Our own research helps explain why. The public’s responses tell us they believe health care is a social contract, a system that serves all of us through a shared set of such values as equality, compassion, mutual obligation, social responsibility and accountability.

Given this prevailing public belief, then, how is it that public health “gets no respect?”

I SEE FOUR FACTORS AT WORK:

Factor Number One – So much of what public health does flies below the radar screen until disaster strikes and that screen becomes all lit up. It’s only then that the cry goes up, “Too little, too late.”

Public concern and federal planning for a possible avian flu pandemic were all but nonexistent for nearly a decade. But after dozens died on the other side of the world and health...
experts warned that H5N1 was a “time bomb” waiting to go off in America, media critics suddenly started demanding, “What took you so long?”

It took years to overcome social inertia and special interest influence before the public acknowledged that childhood obesity has become an epidemic. As a result of this delay and denial we may be raising the first generation of Americans to live sicker and die sooner than their parents.

**Factor Number Two** – While the public health practice field is on task and well networked, in the political world it can be perceived as a disjointed, uncoordinated community that lacks a loyal and loud constituency. Because it is a wheel without a squeak the field gets hit hard when it comes time to cut budgets.

As the federal government expands the stockpile of vaccines and antibiotics for bioterrorism attacks and avian flu, the budget cuts support for the state and local agencies that are supposed to distribute the drugs. That makes no sense.

Take a look at the federal government’s Healthy People 2010 agenda. Preventing diabetes is Goal Number 5. With 800,000 new cases costing upward of $100 billion a year, this is an urgent public health priority, one that is tightly intertwined with the twin epidemics of childhood obesity and adult diabetes. Budget planners, however, stripped away hundreds of millions of dollars from the one U.S. Public Health Service program dedicated to preventing chronic diseases like diabetes. That doesn’t make sense either.

**Factor Number Three** – Most people mistakenly equate better public health with better individual health care. They fail to connect the dots that link their own health to prevention, environment, socio-economic status, risky behavior, geography and circumstances of birth.

For example, I recall a typical “better medicine” story last year that compared the competing benefits of heart-bypass surgery versus stents. Every major newspaper in the country ran it.

But where was the story about the deteriorating health status of a poor neighborhood with no nearby place to shop for meats, fresh fruit and vegetables, nonfat milk and low-fat snacks except at a convenience store where the prices are as much as 50 percent higher than at the suburban supermarket?

This is an important public health story that plays out every day in urban and, yes, even in suburban areas, where kids don’t
get proper physical exercise because gangs and drugs rule the
playgrounds, it's too dangerous to walk to school, and quality
health care is neither accessible nor affordable.

Could it be that no one is telling this story because those hit
hardest are people whom mainstream society forgets or shuns
altogether? People who do the jobs no one else wants to do—
the poor, minorities and immigrants, and people with stigmatized
diseases like AIDS and TB, mental illnesses and addictions to
alcohol and other drugs.

We need to do a better job practicing the wise old saying that to
control a disease anywhere we must control it everywhere. I'd
add this corollary: To improve health anywhere we must improve
it everywhere. And for everyone.

**Factor Number Four** — Public health receives so little public and
political respect because its success demands a level of govern-
ment spending, laws, regulation and scrutiny of individual behavior
that many Americans today are not willing to tolerate.

It is no accident that about 95 percent of all health spending
goes for medical care and biomedical research, but no more than
2 percent for public health and disease prevention. This isn’t just
counterintuitive, it is counter to the public’s safety.

Research tells us that risky behavior and social and physical
environmental dangers cause more than 70 percent of avoidable
deaths. This is where resources should be flowing. But correcting
the 95-to-2 imbalance would require big shifts in how government
allocates public resources and an earthshaking realignment of the
private sector’s economic interests.

Public health leaders tell us that this is a tough sell if you try it on
your own, especially if the public isn’t sure what you really do, your
advocates are few and far between, and so many people are wary
of government intrusion into their lives.

Fortunately, we hold in our hands the power to change the
trajectory of these discouraging trends. The answer, as we see it,
is in what philanthropy and public health can accomplish together.

RWJF is not new to this game. Back in the 1990s we abandoned
our own 95-to-2 funding formula and realigned our public health
strategies, and we have followed a 50-50 split between public
health and health care investing ever since.

Getting it right and keeping it right is a tall order. Our world today
threatens us in ways as dreadful as the Black Death and as shocking
as September 11th. Threats like avian flu are real, the needs they
toggle are urgent, and they define the turbulent environment in which
we are establishing our priorities and making our funding decisions.

Are we ready for what may be coming? We need to know so
that we can decide what to do. In other words, “Show me the
evidence!” And the evidence presents us with a classic case of
the urgent overpowering the important.
On the one hand, the federal rush to build defenses against a would-be mass casualty bioterrorist attack is injecting the public health system with a big wave of new money, its first in decades. This is good.

But the intense national focus on bioterrorism preparedness at the expense of public health is shoving off the local table critical hometown health promotion and prevention issues such as diabetes, obesity, tuberculosis, sexually transmitted diseases, teen pregnancy prevention, and tobacco deterrence.

“Shifting federal priorities and programs are distracting from fixing fundamentals” was the judgment of Trust for America’s Health (TFAH), a major RWJF public health partner. Even though billions are being spent on biodefense, state and local health officials report that their communities actually are less prepared than before 9/11 to deal with sudden crises.

When we funded a study early last year by the Century Foundation Working Group on Bioterrorism Preparedness they found that:

- 80 percent of local public health departments still cannot communicate instantly with state health departments, hospitals or local medical practices.
- Just as the 9/11 Commission found, first responder communications networks remain ineffective, incompatible and without sufficient wireless bandwidth.
- Regional planning among states is scarce and coordination with federal agencies almost nonexistent.

Many states “lack surge capacity”—the ability to triage and treat huge numbers of injured or ill adults and children in an emergency.

Then came Katrina. And, yes, states’ capacity quickly buckled as the crush of hurricane evacuees surged across the continent, ripping huge holes in the public health safety net.

Within days of the storm an unprecedented 45 states and the District of Columbia simultaneously were in federally recognized states of emergency.

Trust in national, state and local preparedness was swept away too. The epic calamity drastically undercut public confidence in our government’s capability to respond to any extreme situation. In one national poll, 70 percent of all adults said government at every level “did a poor job” in preparing for Katrina. And 49 percent expressed little or no confidence in the federal government’s ability to respond to natural disasters.

The public knows what it’s talking about. Late last year the 9/11 Commission gave the government woefully poor grades for its failure to take many of the steps the commissioners recommend are needed to protect the public from terrorist attack.

And the Trust for America’s Health reported that even with all the furor over pandemic flu our cities and states are nowhere near ready to respond adequately to public health catastrophes caused by disease, natural disaster or bioterrorism.

We are left, then, with this unanswered question: What will the government do to prepare for the next Big One and its fallout? Many fear that even now no one knows how to watch our backs.
This is where philanthropy comes in. The long-term goal of the Robert Wood Johnson Foundation is to help the country reverse its preparedness deficit, close the prevention gap, and restore the public's trust in the relevance and value of its own public health system.

We know how to successfully confront some of our most destructive specific health threats—such as smoking, substance abuse and recently, childhood obesity. But focusing on single threats or diseases is too narrow a focus to meet the greater challenges of these times.

We believe now more than ever that the key lies in how all sectors of a community rally to overturn an unacceptable status quo and work together in protecting the safety of their own residents and improving the overall health of the entire community.

It’s called “connectedness” and it is at the heart of how public health must transform itself in the 21st century.

When I apply Kuhn’s teachings to the hidebound status quo of today’s health system, I can see that lasting and meaningful change requires a form of radical retooling that will occur only after a set of crises shatter tradition, nullify the status quo, force “raw and jagged paradigm shifts,” and overturn one worldview for another.

In other words, we need nothing short of a revolution before we can retool. It has been done before. The Flexner Report on medical education in America nearly 100 years ago is one example. Unraveling the secrets of DNA would be another. Katrina is a crisis that is already feeding a revolution.

Kuhn came to mind again last year at a two-day retreat with leaders from philanthropy, business and health care. At the top of our agenda was a discussion of what would happen if we applied the business theory of “disruptive innovations” to health system reform.

Harvard Business School Professor Clayton Christensen not too long ago coined the term “disruptive innovations” to describe a level of change big enough and bold enough to transform business, markets, populations, even entire societies. It’s not an abstract concept. Think of how personal computers and diabetics’...
home glucose monitoring, for example, have made a difference for millions of people around the world.

As I see it, Christensen’s “disruptive innovation” offers a bridge between Kuhn’s revolution and retooling. It’s up to us to know when and how to cross it.

We know that as philanthropists we possess the vision, assets and staying power to retool. We also know from experience how to discover, test and leverage fresh “disruptive innovations” of our own. Examples include our work in improving the quality of care, transforming nursing care at the bedside, reinventing how we manage chronic medical conditions, or covering the uninsured.

This is philanthropy as it should be—summoning the forces of disruptive innovation and retooling to improve the health, health care and quality of life for everyone in America.

🌟🌟🌟

**Real results, however, don’t come from rhetoric.** They come from what real people do in real time in the real world. The only way to see bona fide disruptive innovations at work in public health is to look to the field itself—because, just like in politics and health care, all serious change is local.

- In Nebraska the very idea of “public health” opposes the region’s pioneer tradition of rugged individualism. But now advocates are showing the public the difference between providing medical services for individuals and protecting the health of the entire community. At the same time, the future of public health education in the state is being mapped out by a broad alliance of public and private colleges, health care providers, civic and consumer groups and professional associations. Public health serves “the whole community,” says the director of a new public health master’s program at the University of Nebraska.

- In South Texas fiscal and political pressures are so powerful that they can even block immunization supplies from reaching certain schools. So now low-cost, high-yield community partnerships are stepping in where the government drops out. Aided by RWJF grants, local residents are trained in disease prevention and management, then dispatched to remote rural areas, isolated ranches and impoverished *colonias* of migrants along the northern edge of the Mexican border. They are called *promotoras*; the kids call them *angelitos de salud*—“health angels.” A Texas A&M *promotoras* trainer says, “They are the go-to people who always seem to know everything about everyone, and who know how to get things done.”

- In California, across the bay from San Francisco, the Alameda County public health department is pioneering “the new public health”—strengthening communities from within to take responsibility for their own health. Step One: Engage the whole community as the patient. Step Two: Show neighborhoods how interconnected they are. Small successes mean a lot. Rather than shut down 30 unlicensed street vendors, a public health nurse helped them form a cooperative, buy a closed-down restaurant, and prepare their food in compliance with health regulations. Business boomed and a poor neighborhood discovered that it could solve its own health problems.
In mid-Michigan’s auto belt, churches and community organizations are in a marathon to save the physical and mental health of their citizens in the face of relentlessly hard economic times. A partnership of 100 Flint churches takes physicians in training into poor city neighborhoods to learn from the experiences of low-income mothers. Church members knock on doors to gauge the prevalence and causes of infant mortality. A coalition of local business, labor, education, government, and health care groups provides cost-free coverage to 20,000 people who lack health insurance. Health advocates are winning a long campaign to ban smoking in workplaces. Restaurant owners compete to see who can maintain the most sanitary kitchens. One local leader boasts that it’s hard to tell where government ends and the community begins.

These are inspiring profiles in public health courage and leadership. The level of social connectedness in each of these communities is something many skeptics thought was a lost American quality. Quite the contrary. At RWJF we view it as a quality of life and good health multiplier. We see dedicated public health practitioners forging partnerships with local stakeholders to do together what neither could do on their own. Their efforts are bottom-up rather than top-down. They know how to translate family health information collected at an individual doorstep, into data that can benefit everyone in town.

I know these people and their programs and I’ve spent time out on the streets seeing for myself how they are, indeed, disruptive, innovative and literally in the act of retooling the future good health of communities where they live and work.

As one veteran community health organizer put it, people in communities like these “have come together with a common vision grounded in a commitment to systems of mutual support. That’s a rare thing in a self-focused society.” But it doesn’t have to be that way.

These local leaders are tireless, charismatic, effective communicators and, though they have been on the job a long time, they continue to generate energetic outside-the-box thinking. Nor are they afraid to put good people to work in nontraditional ways. Silos are few and trust is abundant. Accountability flows straight back into the community. And they are proud of what they are achieving.

These local leaders are tireless, charismatic, effective communicators and, though they have been on the job a long time, they continue to generate energetic outside-the-box thinking. Nor are they afraid to put good people to work in nontraditional ways. Silos are few and trust is abundant. Accountability flows straight back into the community. And they are proud of what they are achieving.

In the weeks and months since I returned from the Gulf Coast, I have been reminded just how much we need good news like this. And I’ve also found comfort in knowing that some good old news does not change, no matter what.

This past year marked the 100th anniversary of Jacobson v. Massachusetts, the landmark U.S. Supreme Court decision that
Looking back, we can understand the collective anger, pain and fear we experienced as a nation in those hard days after Katrina when it seemed that our government somehow had failed to hold up its end of that social compact.

I think of the old man alone and afraid on that cot in Gulfport and of the little girl in the corner. I think of the other old man who drove out of New Orleans seeking help and clinging to nothing more than false promises and thin hope.

Our job as philanthropists is to be the disruptive innovator who leads our partners in retooling our public health system so that it delivers on its promises, meets the most healthful expectations of our people and validates human hope.

A firm tree does not fear the storm.

For the sake and honor of those we seek to serve, nor do we.

And our task as social transformers is to strengthen the social compact so that, like a strong tree in a storm, it may bend but never break again. An old proverb from the Dayak peoples of Borneo in Indonesia tells us that:

A firm tree does not fear the storm.

For the sake and honor of those we seek to serve, nor do we.

Respectfully submitted,

$29,410—Communications consultant for Reclaiming Futures: Seattle-King County, Washington (10 months). ID 55508

• Stephen Avakian
HULL, MA
$29,410—Communications consultant for Reclaiming Futures: Montgomery County, Ohio (10 months). ID 55509

• Bill Davie
MARQUETTE, MI
$29,410—Communications consultant for Reclaiming Futures: Marquette County, Michigan (10 months). ID 55506

Reducing Underage Drinking Through Coalitions
Program to raise awareness and support strategies to decrease underage drinking and thus reduce alcohol-related problems among youth.

• Greenlights for NonProfit Success
AUSTIN, TX
$45,460—(4 months). ID 52815

• National Capital Coalition to Prevent Underage Drinking
WASHINGTON, DC
$59,200—(4 months). ID 52867
Substance Abuse Policy Research Program
Program to encourage experts in public health, law, political science, medicine, sociology, criminal justice, economics, psychology, and other behavioral and policy sciences to address issues related to substance abuse.

Program Sites

- University of Alabama at Birmingham School of Public Health
  BIRMINGHAM, AL
  $98,864—Evaluating alcohol use, alcohol policies, and child fatal injury rates (18 months). ID 53772

- University of California, Irvine, Graduate School of Management
  IRVINE, CA
  $97,641—Examining the effects of underage drunk driving laws on cigarette and marijuana consumption by youth (16 months). ID 53632

- University of California, Los Angeles, Integrated Substance Abuse Programs
  LOS ANGELES, CA
  $99,969—Linking substance abuse treatment and child welfare outcomes (1 year). ID 52673
  $99,296—Evaluating access and outcomes for individuals using drug treatment and mental health services (1 year). ID 52784
  $35,000—Studying ethnic differences in access and outcomes for drug treatment and mental health services (1 year). ID 53085

- University of California, San Francisco, Institute for Health Policy Studies
  SAN FRANCISCO, CA
  $70,593—Examining the implementation of welfare reform guidelines that impact substance abuse at the local level (11 months). ID 52765

- Children’s Hospital & Research Center at Oakland
  OAKLAND, CA
  $87,135—Examining patterns of substance abuse and child neglect among homeless families (1 year). ID 52826
  $54,084—Reunification services for African-American homeless mothers with histories of substance abuse (18 months). ID 55503

- University of Georgia Institute for Behavioral Research
  ATHENS, GA
  $280,758—Service delivery and use of evidence-based treatment practices in adolescent substance abuse treatment settings (2 years). ID 53130

- University of Georgia Research Foundation Inc.
  ATHENS, GA
  $99,072—Impact of state regulations and funding policies on the adoption of buprenorphine by community-based treatment programs (18 months). ID 53129

- University of Maryland, Baltimore, School of Medicine
  BALTIMORE, MD
  $328,793—Assessing the impact of the presence of substance abuse treatment centers on neighborhood crime (2 years). ID 53127

- University of Maryland, Baltimore, School of Public Health
  BALTIMORE, MD
  $333,473—Assessing illegal alcohol sales, patron blood alcohol content levels, alcohol control policies, and enforcement at sports stadiums (2 years). ID 53131

- New York Academy of Medicine
  NEW YORK, NY
  $400,000—Evaluating pharmacy-based drug treatment linkages through the New York State Expanded Syringe Access Demonstration Program (2 years). ID 53132

- Oregon Health and Science University
  PORTLAND, OR
  $99,987—Examining how tribal leaders view the effectiveness of specific alcohol-related policies that impact Native Americans (1 year). ID 56200

- Pacific Institute for Research and Evaluation
  CALVERTON, MD
  $305,873—Effect of 14 underage drinking laws on youth traffic deaths (2 years). ID 53129

- Research Foundation of State University of New York
  ALBANY, NY
  $371,324—Improving therapeutic justice courts to effectively identify and treat co-occurring substance abuse and mental illness (2 years). ID 53906

- Research Triangle Institute
  RESEARCH TRIANGLE PARK, NC
  $35,000—Studying the quality of direct care staff at opioid treatment programs (1 year). ID 53958

- Resources for the Future Inc.
  WASHINGTON, DC
  $100,000—Evaluating the health and fiscal issues of reforming alcohol taxes (18 months). ID 53635

- Stanford University School of Medicine
  STANFORD, CA
  $173,119—Reducing or expanding substance use disorder treatment programs: evaluating impact from the health care decision-makers’ perspective (3 years). ID 53128
• University of Washington  
School of Medicine  
SEATTLE, WA  
$400,000—Evaluating a supportive housing and alcohol treatment project for chronically homeless, alcohol-dependent individuals (3 years). ID 53672

• University of Wisconsin–Madison  
The Robert M. LaFollette School of Public Affairs  
MADISON, WI  
$99,121—Examining policy, organizational and health care market factors associated with the adoption of naltrexone in treatment (1 year). ID 56202

• Yale University  
School of Medicine  
NEW HAVEN, CT  
$292,396—Evaluating Medicaid and public funding for buprenorphine treatment of opioid dependence (3 years). ID 55396

Other Program Activities

• Center for Creative Leadership  
GREENSBORO, NC  
$770,009—Technical assistance and direction for the Substance Abuse Policy Research Program (1 year). ID 50846

    $34,650—Commissioned reviews for the Substance Abuse Policy Research Program (22 months). ID 52766

• White Mountain Research Associates, L.L.C.  
DANBURY, NH  
$12,925—Assessing the needs of audiences that use the products of the Substance Abuse Policy Research Program (1 month). ID 52897

Technical Assistance Collaborative Inc.  
BOSTON, MA  
$699,716—Designing and implementing integrated public behavioral health funding (21 months). ID 55403

Rick Williams, Ph.D.  
LOS GATOS, CA  
$59,000—Consulting activities for the Foundation’s addiction treatment diversity scan and stakeholders’ meeting (1 year). ID 53867

Renee Wilson-Simmons, Dr.P.H.  
OCEAN, NJ  
$15,000—Examining the potential of youth development programming as an RWJF funding area (6 months). ID 55372

The Winnow Group, LLC  
ALEXANDRIA, VA  
$83,770—Technical assistance on sustainability for RWJF-funded substance abuse prevention programs (9 months). ID 53316

University of Wisconsin–Madison  
Center for Health Systems Research and Analysis  
MADISON, WI  
$84,999—Disseminating a blueprint for the addiction treatment system of the future (1 year). ID 55304
Action for Healthy Kids, Inc.  
SKOKIE, IL  
$162,737—Leveraging leadership to overcome childhood obesity by extending the impact of the Healthy Schools Summit 2005 (9 months).  
ID 53306

Active for Life:  
Increasing Physical Activity Levels in Adults Age 50 and Older  
Program to increase the number of American adults age 50 and older who engage in regular physical activity.

• Cooper Institute  
DALLAS, TX  
$16,808—Consulting for Active for Life (1 year).  
ID 53091

• University of South Carolina Research Foundation  
COLUMBIA, SC  
$149,787—Evaluation of Active for Life (19 months).  
ID 52927

• Texas A&M University System Health Science Center Research Foundation  
COLLEGE STATION, TX  
$551,567—Technical assistance and direction for Active for Life (1 year).  
ID 48436

Active Living by Design  
Initiative designed to establish and evaluate innovative approaches that support active living.

Program Sites

• American Heart Association Inc., Pacific Mountain Affiliate  
SEATTLE, WA  
$41,867—Enhancing existing physical activity efforts in Lents, Oregon, through walking and tree-planting programs and a site study for a future trailhead (18 months).  
ID 55572

• Berkeley Charleston Dorchester Council of Governments  
NORTH CHARLESTON, SC  
$47,000—Developing a regional bicycle/pedestrian network to promote physical activity (2 years).  
ID 55585

• Buffalo Niagara Medical Campus Inc.  
BUFFALO, NY  
$50,000—Developing walking routes using art and cultural installations as inducements for pedestrian activity (2 years).  
ID 55582

• Town of Chapel Hill  
CHAPEL HILL, NC  
$15,000—Supplemental support for Chapel Hill’s effort to increase active living through physical environment improvements (2 years).  
ID 55584

• East Bay Asian Youth Center  
OAKLAND, CA  
$30,000—Social marketing campaign to increase daily physical activity for children ages 8–13 (1 year).  
ID 55588

• Feet First  
SEATTLE, WA  
$41,500—Using the activity-design-health connection to promote walking and improve the pedestrian environment (14 months).  
ID 55583

• Friends of the Colorado Center for Human Nutrition  
LAKEWOOD, CO  
$45,600—Expansion of the Passport to Active Living program to include students and Latinos (2 years).  
ID 5561

• Ho-Chunk Development Corp.  
WALTHILL, NE  
$15,000—Including youth in the development of a social marketing campaign and other activities to increase physical activity and healthy nutrition habits (18 months).  
ID 5595

• Illinois Health Education Consortium  
CHICAGO, IL  
$20,000—Improving physical activity in low-income communities (2 years).  
ID 5556

• Isanti County  
CAMBRIDGE, MN  
$20,000—Completing a master plan for active living within Isanti County (2 years).  
ID 5565

• Kokua Kalihi Valley Comprehensive Family Services  
HONOLULU, HI  
$35,000—Making a 1.5-mile stretch of Louisville’s Hancock Street a bicycle- and pedestrian-friendly corridor (2 years).  
ID 5557

• Louisville Metro Housing Authority  
LOUISVILLE, KY  
$43,300—Making a 1.5-mile stretch of Louisville’s Hancock Street a bicycle- and pedestrian-friendly corridor (2 years).  
ID 5556

• Maternal & Family Health Services Inc.  
WILKES BARRE, PA  
$20,000—Assisting in the development, maintenance and promotion of trails in Luzerne County (2 years).  
ID 5553

• Metropolitan Government of Nashville and Davidson County  
NASHVILLE, TN  
$35,500—Creating a safer and more conducive environment for children and residents of East Nashville to walk and bike (1 year).  
ID 5550

• Michigan Physical Fitness, Health and Sports Foundation dba Michigan Fitness Foundation  
LANSONG, MI  
$48,600—Expanding an initiative to increase walking and biking to school by providing safe routes (2 years).  
ID 5556
• 1000 Friends of New Mexico
ALBUQUERQUE, NM
$39,250—Enhancing efforts to build safe routes to schools and developing a city-wide initiative to promote active living (2 years). ID 55576

• City of Orlando
ORLANDO, FL
$35,000—Social marketing campaign to brand downtown Orlando as an active living area of the city (18 months). ID 55571

• Our Healthy Community Partnership
OMAHA, NE
$53,700—Developing a city-wide bicycle and pedestrian map and guide (2 years). ID 55569

• PedNet Coalition Inc.
COLUMBIA, MO
$56,700—Increasing physical activity through a network of pedestrian and bicycle paths (2 years). ID 55560

• Slavic Village Development
CLEVELAND, OH
$51,400—Neighborhood design project to increase physical activity and encourage healthy lifestyles (2 years). ID 55559

• City of Somerville Health Department
SOMERVILLE, MA
$45,700—Improving communication strategies to increase physical activity (19 months). ID 55554

• Sustainable South Bronx
BRONX, NY
$35,000—Social marketing campaign to encourage multigenerational use of the South Bronx Greenway (1 year). ID 55581

• Upper Valley Trails Alliance Inc.
NORWICH, VT
$42,200—Specialized winter-focused effort encouraging the use of trails to promote physical activity (2 years). ID 55552

• WalkSacramento
SACRAMENTO, CA
$32,500—Replicating the successful model used in Sacramento for encouraging walking and hiking in the newly incorporated city of Rancho Cordova (20 months). ID 55573

• Young Men’s Christian Association of Orange County
TUSTIN, CA
$47,905—Developing partnerships to increase physical activity (18 months). ID 55577

Other Program Activities

• University of North Carolina at Chapel Hill School of Public Health
CHAPEL HILL, NC
$1,361,478—Technical assistance and direction for Active Living by Design (1 year). ID 48406

Active Living Research
Program to stimulate and support research that will identify environmental factors and policies that influence physical activity.

Program Sites

• American Heart Association Inc., Pacific Mountain Affiliate
SEATTLE, WA
$29,895—Examining how active living advocacy contributed to inclusion of active living environmental issues in the concept planning of an Oregon community (1 year). ID 53703

• Arizona State University
TEMPE, AZ
$30,000—Analyzing how the original design and planning in Greendale, Wisconsin, fostered active living conditions (1 year). ID 53939

• Boston University School of Public Health
BOSTON, MA
$29,653—Study on efforts to renovate inner-city schools to create active living environments (1 year). ID 53705

• University of California, Berkeley, College of Environmental Design
BERKELEY, CA
$149,946—Evaluating the interactions of the social and built environments on children’s active school travel and overall activity (2 years). ID 53926

$12,000—Planning and siting new public facilities in California (14 months). ID 55793

• University of California, Davis, College of Agriculture & Environmental Sciences
DAVIS, CA
$50,000—Studying the role of cul-de-sac streets in encouraging physical activity in children (1 year). ID 53540

• Children’s Memorial Hospital
CHICAGO, IL
$150,000—Studying the relationship between the safety of the built environment and children’s physical activity (1 year). ID 52956

• University of Colorado at Denver and Health Sciences Center
DENVER, CO
$70,327—Analyzing children’s use and perceptions of their local environments for physical activity (2 years). ID 55699

$149,322—Evaluating the effects of inner-city school playground redevelopment on physical activity levels in children (2 years). ID 53073

• George Washington University Institute of Public Policy
WASHINGTON, DC
$59,322—Promoting bicycling in three metropolitan Washington, D.C., counties (1 year). ID 53937
• University of Illinois at Chicago
  College of Nursing
  CHICAGO, IL
  $150,000—Determining the neighborhood
  environments that influence physical activity
  among African-American women (2 years).
  ID 52934

• University of Illinois
  at Urbana-Champaign
  College of Applied Life Studies
  CHAMPAIGN, IL
  $130,550—Studying the effects of sports facilities
  and trail systems on physical activity levels
  among Latino residents (1 year).
  ID 52957
  $50,000—Examining the influence of
  neighborhood walkability characteristics on
  older adults’ walking behavior (19 months).
  ID 53024

• Indiana University School of
  Public and Environmental Affairs
  BLOOMINGTON, IN
  $40,000—Analyzing crime as a barrier to
  using trails for physical activity (16 months).
  ID 55700

• Johns Hopkins University,
  Bloomberg School of Public Health
  BALTIMORE, MD
  $25,000—Factors influencing the use of
  recreational centers and parks by African-
  American adolescents (20 months).
  ID 55761

• Louisiana State University
  Health Sciences Center
  NEW ORLEANS, LA
  $50,000—Studying the impact of playground
  enhancements on physical activity in parks
  (2 years).
  ID 52933

• The Mailman School of Public Health
  at Columbia University
  NEW YORK, NY
  $30,000—Assessing urban infrastructure
  conditions as determinants of physical activity
  (6 months).
  ID 53701

• University of Maryland
  School of Architecture,
  Planning and Preservation
  COLLEGE PARK, MD
  $24,077—Improving the design of commercial
  streets to serve and attract pedestrians (1 year).
  ID 55796

• University of Michigan,
  A. Alfred Taubman College of
  Architecture and Urban Planning
  ANN ARBOR, MI
  $24,942—Determining the accessibility of
  urban multiuse trails and physical activity
  behavior (1 year).
  ID 55799

• University of North Carolina
  at Chapel Hill
  College of Arts and Sciences
  CHAPEL HILL, NC
  $30,000—Study on promoting physical activity
  by integrating school facility planning with
  local land use (8 months).
  ID 53702

• Northern Illinois University
  School of Allied Health/Public
  Health and Health Education
  DEKALB, IL
  $39,984—Understanding the relationship
  between food environments and food access of
  African-American and Latino children and
  their families (1 year).
  ID 55697

• University of Pennsylvania
  School of Design
  PHILADELPHIA, PA
  $29,092—Downtown living 1990–2004:
  Policies spark dramatic residential growth in
  Philadelphia (1 year).
  ID 53938

• Regional Plan Association Inc.
  NEW YORK, NY
  $60,000—Studying the role of traffic calming
  in encouraging walking and bicycling (1 year).
  ID 53700

• Resources for the Future Inc.
  WASHINGTON, DC
  $59,622—Active living through brownfield-to-
  greenspace conversions (1 year).
  ID 55361

• St. Louis University
  School of Public Health
  ST. LOUIS, MO
  $59,891—Studying policy changes in the
  development of community trails (1 year).
  ID 53704

• Texas A&M Research Foundation
  CORPUS CHRISTI, TX
  $24,966—Evaluating the built environment
  around transit stations and its influence
  on transit ridership (17 months).
  ID 53025
  $24,838—Developing an environmental audit
  tool for creating safe routes to school (2 years).
  ID 55829

• Virginia Polytechnic Institute and
  State University College of
  Architecture and Urban Studies
  BLACKSBURG, VA
  $59,226—Reforming codes to promote active
  living communities: the Wisconsin Smart
  Growth Act of 1999 (1 year).
  ID 53936

Other Program Activities

• San Diego State University
  Foundation dba San Diego State
  University Research Foundation
  SAN DIEGO, CA
  $1,060,838—Technical assistance and direction
  for Active Living Research (1 year).
  ID 51835

Active Living Resource Center
Program to improve health by encouraging
 collaboration among planning, health and
 nontraditional entities for the purpose of designing
 activity-friendly communities.

• Bicycle Federation
  BETHESDA, MD
  $395,888—(1 year).
  ID 52541
Added Value & Herban Solutions Inc.
BROOKLYN, NY
$50,000—Creating a community wellness council to address nutrition and physical activity in the Red Hook community of Brooklyn (1 year). ID 53157

Advertising Council Inc.
NEW YORK, NY
$346,729—Establishing a public/private coalition for healthy children (18 months). ID 52756

American Association of School Administrators
ARLINGTON, VA
$30,000—Special spring 2006 issue of School Governance & Leadership focused entirely on healthy eating and active living (6 months). ID 55893

American Heart Association Inc.
DALLAS, TX
$100,000—Production and distribution of a childhood obesity sourcebook (3 months). ID 52986

American Journal of Health Promotion
WEST BLOOMFIELD, MI
$51,485—Supplement to the American Journal of Health Promotion on culturally sensitive physical activity interventions (1 year). ID 52441

University of Arkansas for Medical Sciences, Arkansas Center for Health Improvement
LITTLE ROCK, AR
$585,847—Maintaining an epidemiological database on childhood obesity in Arkansas (20 months). ID 51741

University of Arkansas for Medical Sciences, College of Public Health
LITTLE ROCK, AR
$1,118,963—Evaluating school policies to combat childhood obesity in Arkansas (2 years). ID 51737

Boule Foundation
ATLANTA, GA
$12,500—Engaging African-American leaders in a discussion about childhood obesity (7 months). ID 52764

Brigham & Women’s Hospital Inc.
BOSTON, MA
$199,988—Determining the role that evidence-based e-health can play in reducing the incidence and prevalence of childhood obesity (1 year). ID 53734

California School Boards Foundation
WEST SACRAMENTO, CA
$155,325—Formative research for disseminating California’s student wellness policies (15 months). ID 53816

University of California, Los Angeles, Center for Health Policy Research
LOS ANGELES, CA
$698,035—Expansion of the 2005 California Health Interview Survey to include community trends in children’s healthy eating and physical activity (18 months). ID 52052

Children Now
OAKLAND, CA
$50,000—Conference on creating a healthy media environment for children (10 months). ID 52714

Communications Projects
MULTIPLE CONTRACTORS
$50,000—Strategic communications for the Foundation’s Childhood Obesity interest area programming (4 months). ID 55247

$100,000—Gathering lessons learned and facilitating cross-learning among the Foundation’s Childhood Obesity action grants (2 years). ID 52665

$23,129—Audiovisual support for a conference on environmental solutions to obesity among youth (4 months). ID 53492

Community-Based Childhood Obesity Prevention Within the Injury Free Coalition for Kids Initiative Sites
Building on the Injury Free Coalition for Kids initiative, selected sites will add healthy eating environments and programs into their ongoing focus on physical activity and developing safe play areas.

Program Sites

• Arkansas Children’s Hospital Research Institute
LITTLE ROCK, AR
$59,951—Increasing elementary school students’ access to nutritious food and physical activity (18 months). ID 55999

• Children’s Hospital Medical Center
CINCINNATI, OH
$56,232—Testing the use of high school student peer counselors to teach diabetes and obesity awareness to elementary school students (18 months). ID 55998

• Children’s Memorial Hospital
CHICAGO, IL
$60,000—Increasing access to and knowledge of healthy foods by reducing economic barriers to a fresh produce distribution program (18 months). ID 55994

• Columbia University Medical Center
NEW YORK, NY
$60,000—Healthy Schools Healthy Lifestyles: improving nutrition and reducing obesity for northern Manhattan elementary school students (18 months). ID 55997

• Connecticut Children’s Medical Center
HARTFORD, CT
$60,000—Kid Healthy Program: increasing the consumption of healthy food and daily exercise (18 months). ID 55992

  ID 53318

• PedNet Coalition Inc.
  COLUMBIA, MO
  $50,000—Increasing healthy food choices for elementary school students (18 months).
  ID 53392

• Slavic Village Development
  CLEVELAND, OH
  $50,000—Encouraging environmental changes and providing nutritional information to promote healthy eating (18 months).
  ID 53319

• City of Somerville Health Department
  SOMERVILLE, MA
  $50,000—Addressing the economic and cultural barriers to healthy eating choices for low-income families (18 months).
  ID 53325

• Upper Valley Trails Alliance Inc.
  NORWICH, VT
  $50,000—Community-based project to develop wellness policies and increase healthy eating among children (18 months).
  ID 53390
• Young Men’s Christian Association of Orange County
  TUSTIN, CA
  $50,000—Increasing access to healthier food choices for children (18 months). ID 53393

Other Program Activities

• University of North Carolina at Chapel Hill School of Public Health
  CHAPEL HILL, NC
  $200,293—Providing technical assistance, preparing case studies and reporting on lessons learned from Healthy Eating by Design (20 months). ID 52786

  $116,398—Providing technical assistance, preparing case studies and reporting on lessons learned from Healthy Eating by Design (2 years). ID 53482

  $12,000—Supplemental support for a Healthy Eating by Design conference (3 months). ID 53822

• Wake Forest University Health Sciences
  WINSTON-SALEM, NC
  $99,899—Exploratory evaluation of Healthy Eating by Design (18 months). ID 52916

Healthy Eating Research: Building Evidence to Prevent Childhood Obesity

Program to support investigator-initiated research to identify and assess environmental and policy influences with the greatest potential to improve healthy eating and weight patterns among the nation’s children.

• University of Minnesota School of Public Health
  MINNEAPOLIS, MN
  $152,913—Technical assistance and direction for Healthy Eating Research (5 months). ID 55477

Janet Heroux
  PRINCETON, NJ
  $3,250—Program development consulting for the Foundation’s Childhood Obesity interest area (1 month). ID 53628

The HSC Foundation
  WASHINGTON, DC
  $53,373—Focus groups to gain information for policy development on how to best communicate childhood obesity information to low-income minority parents (1 year). ID 55302

University of Illinois at Chicago Institute of Government and Public Affairs
  CHICAGO, IL
  $49,896—Effects of Title IX and girls’ sports participation on adolescent body mass index (1 year). ID 53731

University of Illinois at Urbana-Champaign College of Applied Life Studies
  CHAMPAIGN, IL
  $9,850—Convening teachers at the Walking for Health conference to brainstorm on how to increase walking in schoolchildren (6 months). ID 55523

Intergenerational Programming with Active for Life

Program to support efforts of senior service organizations to increase access to healthy, lower-calorie foods and opportunities for safe, daily physical activity through policy and environmental change in order to prevent obesity among children living in low-income, culturally diverse neighborhoods and communities.

• Texas A&M University System Health Science Center Research Foundation
  COLLEGE STATION, TX
  $90,000—Technical assistance and direction for Intergenerational Programming with Active for Life to Reduce Childhood Obesity (2 years). ID 52920

Kingsley Association
  PITTSBURGH, PA
  $250,000—Incorporating childhood obesity prevention into a community-wide initiative to address diabetes among low-income adults (2 years). ID 55818

League of American Wheelmen Inc. dba League of American Bicyclists
  WASHINGTON, DC
  $50,000—Planning for a national initiative on providing safe bike routes to schools (1 year). ID 55526

Barbara A. Leonard, M.P.H.
  WINSLOW, ME
  $30,000—Consulting services for the Foundation’s Childhood Obesity interest area (4 months). ID 53841

The Leonard Group
  WINSLOW, ME
  $231,864—Providing technical assistance to the Childhood Obesity Team and the Health Group (1 year). ID 56250
Loyola University Chicago
Graduate School
CHICAGO, IL
$65,000—Pilot effort to increase fresh fruit and vegetable choices through classroom nutrition education and salad bars in two Chicago minority schools (1 year). ID 53126

MEE Productions Inc.
PHILADELPHIA, PA
$171,604—Determining the essential components of an awareness-raising campaign on childhood obesity aimed at African-American and Latino leadership communities (8 months). ID 52183

University of Michigan
School of Public Health
ANN ARBOR, MI
$100,000—Convening community asthma coalitions to identify and document the potential for using these coalitions to address childhood obesity (1 year). ID 53736

National Committee
for Quality Assurance
WASHINGTON, DC
$49,834—Identifying potential quality measurement approaches for childhood obesity (6 months). ID 52660

National Dance Institute
New Mexico Inc.
SANTE FE, NM
$50,014—Pilot testing a dance training curriculum to increase physical activity among schoolchildren (1 year). ID 53815

National Governors Association
Center for Best Practices
WASHINGTON, DC
$562,854—National initiative to help governors implement state programs to combat childhood obesity (1 year). ID 55334

National Initiative for
Children’s Healthcare Quality Inc.
CAMBRIDGE, MA
$505,245—2006 Health Care Provider Congress on Childhood Obesity: laying the groundwork for a learning network to improve clinical services (1 year). ID 53828

Medicare/Medicaid Integration Program

A state demonstration program to test the operation and design of delivery systems that integrate long-term and acute care services under combined Medicare and Medicaid capitation payments for elderly patients.

George Mason University

College of Nursing and Health Science

Fairfax, VA

$222,210—Technical assistance and direction for the Medicare/Medicaid Integration Program (1 year). ID 52729

Memorial Hospital

Pawtucket, RI

$149,517—Rx Assist: an Internet-based program to assist low-income and uninsured populations to obtain medications (6 months). ID 53639

National Center for State Courts

Williamsburg, VA

$124,872—Building a toolkit to develop problem-solving approaches within state courts (18 months). ID 52846

NCB Development Corporation

Oakland, CA

$9,584,202—Replication of the Green House Project: developing small community homes as alternatives to nursing homes (5 years). ID 53217

Population Communications International Incorporated

New York, NY

$50,000—Conference on programs designed to improve women’s health status and raise awareness about HIV/AIDS and other health and social issues (6 months). ID 55588

Research Foundation of the City University of New York

New York, NY

$98,597—Technical assistance and data support to agencies developing service programs for prisoners re-entering society in New York City (1 year). ID 53732
San Diego State University Foundation dba
San Diego State University Research Foundation
SAN DIEGO, CA
$105,314—Studying family advocates’ perspectives on youth mental health clinics (9 months).
ID 53188

Sickness Prevention Achieved Through Regional Collaboration Inc.
LAKEVILLE, CT
$8,058—Guidance and technical assistance for a polling place vaccination program for the elderly (1 year).
ID 55855

Sports4Kids
OAKLAND, CA
$4,421,874—National expansion of Sports4Kids, a program that promotes physical activity and play at schools (32 months).
ID 53552

Supportive Housing and Managed Care Pilot dba
Hearth Connection
MINNEAPOLIS, MN
$719,196—Making the business case for supportive housing (32 months).
ID 51237

Texas A&M University System Health Science Center Research Foundation
COLLEGE STATION, TX
$2,898,969—Expanding an integrated system of health care in the Texas border region (3 years).
ID 53651

Urban Health Initiative: Working to Ensure the Health and Safety of Children
Program to improve the health and safety of young people in urban areas by improving collaboration among youth-serving agencies and organizations.

</table>
For more than two decades, we have sought systematically to improve health by reducing the harmful effects of substance-use disorders and addictions. Our early work centered on addiction prevention efforts. Our more recent efforts focus on improving the quality of treatment for those with substance-use disorders and addictions.

According to the Substance Abuse and Mental Health Services Administration's 2003 National Survey on Drug Use and Health: National Findings, only 8 percent of the approximately 22 million Americans age 12 and older who need addiction care receive treatment for their disorder, and only a fraction of those receiving care get treatment that is based on accepted, best-known practices. Another study reporting on the practices of 171 community-based treatment centers finds that only 48 percent of these programs use proven psychosocial interventions, and only 17 percent routinely prescribe medications known to alleviate alcohol or opiate dependence (Roman and Johnson, 2002). A third report, in the New England Journal of Medicine, further underscores the imperative for addressing the quality of addiction care by noting that among all American primary care centers, 89 percent do not offer addiction treatment services. Indeed, improving patient outcomes is most difficult when those in need of addiction care cannot access appropriate services or if the services provided are not based on the best treatment practices.

In 2005 the Addiction Prevention and Treatment team focused on identifying and institutionalizing multiple approaches to improving treatment quality. We joined with the National Quality Forum to bring together experts representing state and federal agencies to determine five specific categories of evidenced-based addiction care practices: appropriate use of screening and brief interventions; psychosocial clinical interventions (such as motivational interviewing and cognitive behavioral therapies); individualized supportive services (such as employment training, child care and transportation); aftercare; and appropriate use of pharmacotherapy. The Foundation also supported an Institute of Medicine (IOM) report, Improving the Quality of Health Care for Mental and Substance Use Conditions: Quality Chasm Series, which decries the lack of knowledge of evidenced-based practices in behavioral health services and calls for the use of proven quality treatment approaches and integrated services such as child care for single parents undergoing addiction therapy.

The IOM recommended improving system performance, developing policies that promote quality, removing barriers that discourage aftercare and recovery, and developing and disseminating knowledge about treatment quality. Several Foundation programs work toward the IOM’s recommendations. In 2005 Paths to Recovery continued to work with care providers to demonstrate process innovations to
improve access and retention rates in treatment centers. Reclaiming Futures project leaders from 10 states went to Capitol Hill to educate policy-makers about model practices shown to improve the chances of youth in the juvenile justice system to be productive, drug-free adults. Both programs demonstrated how organizational and system changes, as well as financing strategies, can improve quality and performance of addiction care. In addition, the Substance Abuse Policy Research Program supported more than 270 distinct policy research studies, several of which document health care cost savings achieved when medical and addiction care are provided simultaneously.

In the coming years RWJF will continue to find ways to implement the best addiction care practices; strengthen relationships between state purchasing agencies, addiction care providers and consumers; and advance consumer-driven initiatives that will improve the quality of addiction care and patient outcomes. For more information about this team’s initiatives and objectives, visit www.rwjf.org/addiction.

ALEXANDRIA, VA
$83,770—Technical assistance on sustainability for RWJF-funded substance abuse prevention programs (9 months). ID 53316

University of Wisconsin–Madison
Center for Health Systems Research and Analysis
MADISON, WI
$84,999—Disseminating a blueprint for the addiction treatment system of the future (1 year). ID 55304

2005 ANNUAL REPORT
Robert Wood Johnson Foundation
TARGETED PORTFOLIO
Childhood Obesity Program Area Update

The Childhood Obesity team seeks to help halt the rise in childhood obesity by promoting healthy eating and physical activity in schools and communities throughout the nation. We place special emphasis on reaching African-American, Hispanic, Native American and Asian/Pacific Islander children living in low-income communities, who are at greatest risk for obesity and its related health threats. Throughout our work, we seek to learn what changes to policies and environments will most effectively increase kids’ and families’ access to healthy foods and opportunities for safe physical activity.

Schools play a critical role in expanding such access; that’s where many children consume a substantial portion of their daily food and beverages and have safe places for physical activity. As a result, schools have become a logical—and highly visible—focal point in the fight against childhood obesity.

Our vision is one in which schools provide quality physical education (PE) for every student in every grade, every day, and serve or sell only healthy foods and beverages to students. Momentum toward reaching these goals is growing, but there is a long way to go. We are encouraged that legislatures across the country are enacting or considering policies to improve school nutrition and to enable students to get more physical activity in and around schools. To track progress toward these objectives, the Foundation monitors state legislation on school policies that could prevent childhood obesity.

In 2005 we worked with the Health Policy Tracking Service (HPTS) to track and analyze proposed and enacted legislation related to child and adolescent nutrition, physical activity and obesity. HPTS monitors policy developments on issues ranging from vending machine policies and PE requirements to body mass index (BMI) tracking and safe routes to school initiatives. By the close of the 2005 legislative sessions, 42 states had introduced legislation to provide some level of nutritional guidance for schools, and measures were enacted in 21 states. Forty-four states introduced legislation setting guidelines for physical education or physical activity standards, with measures enacted in 22 states.

HPTS also served as an important data source for another team-supported project that is systematically analyzing proposed and enacted legislation in 10 sentinel states. Researchers at St. Louis University are collaborating with investigators in the Foundation’s Bridging the Gap initiative to develop a system for rating the types and characteristics of obesity-related state legislation that will enable public health leaders, policy-makers and advocates to better estimate the impact of varied policies on the prevention of childhood obesity—an important first step in defining “model” state policies.
The Foundation also awarded grants in 2005 to organizations that work closely with state leaders to promote the spread of promising policies to combat childhood obesity. For example, Arkansas Governor Mike Huckabee, chairman of the National Governors Association (NGA), launched the Healthy America Initiative, an effort to motivate and provide governors with tools to tackle obesity and encourage healthy lifestyles in all U.S. states and territories. The Childhood Obesity team is helping the NGA Center for Best Practices educate governors about realistic policy options and share strategies backed by promising evidence. The NGA Center also will provide governors and their staffs with tailored materials on school, family and worksite wellness efforts to spread effective policies and practices across states.

The Childhood Obesity team also tracks the outcomes of policy changes in vanguard states working to prevent and reduce obesity among kids. The 2003 passage of Arkansas Act 1220 represented the nation’s most ambitious state-level attempt to counter obesity through school policies. This comprehensive legislation required all public schools to establish nutrition and physical activity standards, eliminate access to vending machines in elementary schools and, most notably, record yearly BMI measurements for K–12 students and notify parents of results. The Foundation provided funding to the University of Arkansas for Medical Sciences to conduct a multiyear evaluation of the law’s implementation and impact. Results not only will inform health and education leaders in Arkansas, but also will guide the development of similar school policies in states across the country.

Looking ahead, the Childhood Obesity team will continue to monitor states’ progress in adopting policies that increase children’s access to healthy foods and beverages and to physical activity in schools. We will fund rigorous assessments of policy changes within school environments in the first round of the Healthy Eating Research program, as well as through the team’s new rapid evaluation initiative. For more information about this team’s initiatives and objectives, visit www.rwjf.org/obesity.
Action for Healthy Kids, Inc.  
SKOKIE, IL  
$162,737—Leveraging leadership to overcome childhood obesity by extending the impact of the Healthy Schools Summit 2005 (9 months). ID 53306

Active for Life: Increasing Physical Activity Levels in Adults Age 50 and Older  
Program to increase the number of American adults age 50 and older who engage in regular physical activity.

• Cooper Institute  
DALLAS, TX  
$16,808—Consulting for Active for Life (1 year). ID 53091

• University of South Carolina Research Foundation  
COLUMBIA, SC  
$149,787—Evaluation of Active for Life (19 months). ID 52927

• Texas A&M University System Health Science Center Research Foundation  
COLLEGE STATION, TX  
$551,567—Technical assistance and direction for Active for Life (1 year). ID 52927

Active Living by Design  
Initiative designed to establish and evaluate innovative approaches that support active living.

Program Sites

• American Heart Association Inc., Pacific Mountain Affiliate  
SEATTLE, WA  
$41,867—Enhancing existing physical activity efforts in Lents, Oregon, through walking and tree-planting programs and a site study for a future trailhead (18 months). ID 55572

• Berkeley Charleston Dorchester Council of Governments  
NORTH CHARLESTON, SC  
$47,000—Developing a regional bicycle/pedestrian network to promote physical activity (2 years). ID 55585

• Buffalo Niagara Medical Campus Inc.  
BUFFALO, NY  
$50,000—Developing walking routes using art and cultural installations as inducements for pedestrian activity (2 years). ID 55582

• Town of Chapel Hill  
CHAPEL HILL, NC  
$15,000—Supplemental support for Chapel Hill’s effort to increase active living through physical environment improvements (2 years). ID 55584

• East Bay Asian Youth Center  
OAKLAND, CA  
$30,000—Social marketing campaign to increase daily physical activity for children ages 8–13 (1 year). ID 55568

• Feet First  
SEATTLE, WA  
$41,500—Using the activity-design-health connection to promote walking and improve the pedestrian environment (14 months). ID 55583

• Friends of the Colorado Center for Human Nutrition  
LAKEWOOD, CO  
$45,600—Expansion of the Passport to Active Living program to include students and Latinos (2 years). ID 55561

• Ho-Chunk Development Corp.  
WALTHILL, NE  
$15,000—Including youth in the development of a social marketing campaign and other activities to increase physical activity and healthy nutrition habits (18 months). ID 55595

• Illinois Health Education Consortium  
CHICAGO, IL  
$20,000—Improving physical activity in low-income communities (2 years). ID 55556

• Isanti County  
CAMBRIDGE, MN  
$20,000—Completing a master plan for active living within Isanti County (2 years). ID 55565

• Kokua Kalihi Valley Comprehensive Family Services  
HONOLULU, HI  
$27,250—Integrating physical activity into daily living (2 years). ID 55564

• Louisville Metro Housing Authority  
LOUISVILLE, KY  
$43,300—Making a 1.5-mile stretch of Louisville’s Hancock Street a bicycle- and pedestrian-friendly corridor (2 years). ID 5567

• Maternal & Family Health Services Inc.  
WILKES BARRE, PA  
$20,000—Assisting in the development, maintenance and promotion of trails in Luzerne County (2 years). ID 55553

• Metropolitan Government of Nashville and Davidson County  
NASHVILLE, TN  
$35,500—Creating a safer and more conducive environment for children and residents of East Nashville to walk and bike (1 year). ID 55550

• Michigan Physical Fitness, Health and Sports Foundation dba Michigan Fitness Foundation  
LANSYNG, MI  
$48,600—Expanding an initiative to increase walking and biking to school by providing safe routes (2 years). ID 55566
**• 1000 Friends of New Mexico**  
ALBUQUERQUE, NM  
$39,250—Enhancing efforts to build safe routes to schools and developing a city-wide initiative to promote active living (2 years). ID 55576

**• City of Orlando**  
ORLANDO, FL  
$35,000—Social marketing campaign to brand downtown Orlando as an active living area of the city (18 months). ID 55571

**• Our Healthy Community Partnership**  
OMAHA, NE  
$53,700—Developing a city-wide bicycle and pedestrian map and guide (2 years). ID 55569

**• PedNet Coalition Inc.**  
COLUMBIA, MO  
$56,700—Increasing physical activity through a network of pedestrian and bicycle paths (2 years). ID 55560

**• Slavic Village Development**  
CLEVELAND, OH  
$51,400—Neighborhood design project to increase physical activity and encourage healthy lifestyles (2 years). ID 55559

**• City of Somerville Health Department**  
SOMERVILLE, MA  
$45,700—Improving communication strategies to increase physical activity (19 months). ID 55554

**• Sustainable South Bronx**  
BRONX, NY  
$35,000—Social marketing campaign to encourage multigenerational use of the South Bronx Greenway (1 year). ID 55581

**• Upper Valley Trails Alliance Inc.**  
NORWICH, VT  
$42,200—Specialized winter-focused effort encouraging the use of trails to promote physical activity (2 years). ID 55552

**• WalkSacramento**  
SACRAMENTO, CA  
$32,500—Replicating the successful model used in Sacramento for encouraging walking and biking in the newly incorporated city of Rancho Cordova (20 months). ID 55573

**• Young Men’s Christian Association of Orange County**  
TUSTIN, CA  
$47,905—Developing partnerships to increase physical activity (18 months). ID 55577

**Other Program Activities**

**• University of North Carolina at Chapel Hill School of Public Health**  
CHAPEL HILL, NC  
$1,361,478—Technical assistance and direction for Active Living by Design (1 year). ID 48406

**Active Living Research**
Program to stimulate and support research that will identify environmental factors and policies that influence physical activity.

**Program Sites**

**• American Heart Association Inc., Pacific Mountain Affiliate**  
SEATTLE, WA  
$29,895—Examining how active living advocacy contributed to inclusion of active living environmental issues in the concept planning of an Oregon community (1 year). ID 53703

**• Arizona State University**  
TEMPE, AZ  
$30,000—Analyzing how the original design and planning in Greendale, Wisconsin, fostered active living conditions (1 year). ID 53939

**• Boston University School of Public Health**

TARGETED PORTFOLIO
Coverage Program Area Update

Nearly 46 million Americans have no health insurance, including more than 8 million children, according to the U.S. Census Bureau. The Coverage team seeks to ensure that all Americans have stable, affordable health care coverage by the year 2010. As a first step toward achieving coverage for all, the team has been working to enroll uninsured, eligible children in public health care coverage programs and is tracking progress toward that goal.

A recent analysis of the National Health Interview Survey\(^1\) shows considerable progress. Since 1998 the number of uninsured children has dropped by over 2 million, largely through enrollment in Medicaid and the State Children's Health Insurance Program (SCHIP). Remarkably, this decline took place while the number of uninsured adults increased by more than 1 million.

This decline in uninsured children has been due in part to the efforts of the Covering Kids program, which has helped create important reforms. Despite a challenging environment marked by state reductions in Medicaid spending and loss of employer-provided coverage, today 38 states and the District of Columbia offer coverage to children in families with income eligibility limits at or above 200 percent of the federal poverty level. In 1997 only six states offered such coverage, and three times as many states required an asset test. When Covering Kids began, almost five times as many states required face-to-face interviews as do today. This year's sixth annual Covering Kids and Families\(^2\) Back-to-School Campaign achieved noteworthy results, including thousands of local activities in all 50 states and the District of Columbia to encourage parents to enroll their eligible children in Medicaid or SCHIP, along with a more than 250 percent increase in calls by parents to the federal (877) KIDS-NOW hotline and a 300 percent increase in calls in the six CKF target markets\(^2\) when comparing the pre-and post-campaign launch periods.

Despite this progress and the decrease in overall numbers of uninsured children, more than seven out of 10 uninsured children who appear to be eligible for Medicaid and SCHIP have yet to enroll. As CKF grants close, specific new enhancements to the CKF Web site—including online technical assistance and training—will help maintain efforts to enroll children. We will also continue building and sustaining capacity through integrated year-round campaigns that promote stable, affordable coverage.

\(^1\) Going Without: America's Uninsured Children. Conducted by the State Health Access Data Assistance Center (SHADAC) and the Urban Institute, August 2005.

\(^2\) Please note that in most of the target markets, a state rather than the national toll-free hotline number was promoted, which is not accounted for in this percentage increase.
In addition to building opinion leader support for expanded coverage and increasing enrollment in public coverage programs, the team will continue supporting state coverage efforts and conducting research and analysis on factors that affect the availability of affordable, stable coverage. For more information about this team’s initiatives and objectives, visit www.rwjf.org/coverage.

TARGETED PORTFOLIO
Disparities Program Area Update

One way to ensure that all Americans have access to quality health care is to eliminate the gaps in care that racial and ethnic minorities experience. In pursuit of that goal, the Disparities team focuses on (1) better understanding the multiple factors that lead to racial and ethnic health care disparities, and (2) finding practical, effective solutions that will help health care systems improve the quality of care for all patients.

The proportion of traditionally underserved groups receiving evidence-based care in targeted diseases is one indicator we use to measure our progress. We are targeting three specific diseases: cardiovascular disease, diabetes mellitus and depression. We chose these illnesses because with each there is strong evidence of racial and ethnic disparities and each has robust evidence supporting a recommended standard of care. In 2005 we launched Expecting Success: Excellence in Cardiac Care, a national initiative to improve cardiovascular care for African-American and Latino patients in both inpatient and outpatient settings. This program, administered by George Washington University’s School of Public Health and Health Services, will lead 10 selected hospitals through a collaborative effort to measure and enhance systematically the quality of cardiac care provided to their patients. We hope this program will show us what quality improvement initiatives look like in several hospital settings serving different minority populations across the country. The program will share successes nationwide throughout the four-and-a-half-year initiative.

RWJF launched two other initiatives in 2005 aimed at developing and testing potential solutions to racial and ethnic disparities in health care, Finding Answers and Leading Change. Finding Answers: Disparities Research for Change is a national program led by researchers at the University of Chicago that will focus on evaluating existing interventions to reduce racial and ethnic disparities in health care. Finding Answers will seek interventions that rely on proven quality improvement techniques, such as data collection and disease management strategies. Leading Change: Disparities Solutions Initiative, housed at the Institute for Health Policy at Massachusetts General Hospital, will synthesize the results of other disparities projects funded by the Foundation (especially from Finding Answers), and will use these consolidated results to help health care systems nationwide develop and implement successful disparities interventions.

We also recognize that health plans play a critical role in reducing disparities. We currently support two collaboratives to help health plans learn more about the ways in which racial and ethnic disparities affect their members and how to target quality-improvement efforts toward specific racial and ethnic populations. One of the collaboratives includes major national health insurance companies and is
aimed at testing provider-, member- and community-targeted approaches to reduce gaps in care and help patients with chronic illnesses receive better quality of care. The other, a group of high-performing Medicaid plans, is designed to reduce disparities in Medicaid managed care organizations.

Over the next year, the Disparities team will foster these collaborative efforts toward finding promising solutions, rigorously evaluating them and helping providers, clinics and hospitals across the country realize the practical promise of these potential solutions to reducing disparities. The end result of this effort should be a higher quality of care for all patients. For more information about this team’s initiatives and objectives, visit www.rwjf.org/disparities.

TARGETED PORTFOLIO
Nursing Program Area Update

The Nursing team seeks to reduce the shortage in nurse staffing and improve the quality of nursing care by transforming the way care is delivered at the bedside. We expect to build support for a new kind of hospital that reflects the needs and realities of the 21st century: a hospital where patient safety is ensured, quality of care is paramount, efficiencies are maximized, and staff are satisfied with and actively supported in their jobs. Although this initiative begins with the nursing profession, the results from these efforts are expected to have a positive impact on all health care workers in hospitals and the millions of patients they serve.

One of the Foundation’s key nursing initiatives in 2005 continued to be Transforming Care at the Bedside (TCAB), a program to improve the quality and safety of patient care and increase retention of experienced nurses. Supported by RWJF in collaboration with the Institute for Healthcare Improvement, TCAB empowers nurses to make changes in bedside care, guided by the insights of patients and their families. The initiative began in three pilot hospitals in 2003; by the end of 2005, 13 hospitals were participating in the program.

Two interrelated elements of TCAB are (1) the program generates innovations and (2) creates a process to further develop, test and implement those innovations. One of our goals is to spread both the innovations and the process that generates them. We made progress on both of these strategies in 2005, and expect that at least 40 hospitals will engage in the TCAB process in the third phase of the program, which we plan to launch in 2006.

RWJF awarded funds in 2005 to each of the three pilot hospitals—Seton Northwest Hospital in Austin, Texas; UPMC Shadyside in Pittsburgh; and Kaiser Foundation Hospital in Roseville, Calif.—to spread the TCAB process to other units in their hospitals, and to other hospitals in their health care systems. An evaluation will be conducted to shed light on what it takes to spread the TCAB process, separate from spreading the innovations themselves.

Together the TCAB hospitals have tested 300 innovations; the number of innovations tested in each hospital varied from 10 to 51. Innovations were tested in four areas: reliability, vitality, patient-centeredness and value. Improving reliability ensures that care for hospital patients is safe, reliable, effective and equitable. Innovations in this area include projects to alert staff when patients are at a high risk of falling. Vitality means creating a supportive environment that encourages professional development and effective teamwork. Innovations include conducting patient rounds with nurses and physicians together. A focus on patient-centered care honors the whole patient and family, and respects individual values and choices. Some of these innovations include placing whiteboards in patients’ rooms on which
they list daily goals and instituting “peace and quiet time” to encourage a healing environment. Finally, activities that increase value reduce the amount of time nurses spend on activities that take them away from direct patient care. One innovation to increase value is placing needed supplies in patients’ rooms—rather than in a central location—to reduce the time nurses spend hunting and gathering.

In 2005 RWJF supported projects to encourage the spread of three particularly promising innovations to hospitals outside the TCAB initiative. These innovations focus on preventing patient falls, improving communication among hospital staff, and forming rapid response teams (a group of clinicians that nurses and other hospital staff can call on to intervene if a patient’s condition is deteriorating, but not yet critical). As we learn more about the effectiveness of innovations tested in TCAB hospitals, we expect to disseminate these promising practices more broadly.

We also continue to be interested in projects that build the evidence around improving hospitals’ physical design and to share that evidence with hospital decision-makers. Both of these strategies require attention to improving the culture of hospitals, ensuring that nurses are supported and respected in their jobs and that patient care is paramount.

Recognizing that the challenges and opportunities for nursing reach beyond hospital walls, the Nursing team is also committed to building nurse leadership and supporting collaboration among partners to address nursing issues more broadly. For more information about this team’s initiatives and objectives, visit [www.rwjf.org/nursing](http://www.rwjf.org/nursing).

# NURSING
## 2005 GRANTS AND CONTRACTS

**AcademyHealth**  
WASHINGTON, DC  
$35,000—Analysis of international nurse migration trends (1 year). ID 52892

**American Academy of Nursing Inc.**  
MILWAUKEE, WI  
$357,880—Identifying potential technological solutions to improve the nurse work environment on medical/surgical units (18 months). ID 55767

**American Public Health Association Inc.**  
WASHINGTON, DC  
$27,000—Wisdom Works: a white paper to describe best practice retention strategies for older, experienced nurses (4 months). ID 53298

**Ascension Health**  
ST. LOUIS, MO  
$300,000—Study on how medical/surgical nursing staff spend their time (1 year). ID 52095

**Association of Academic Health Centers Inc.**  
WASHINGTON, DC  
$32,918—Developing a white paper and convening a workshop on the nursing faculty shortage (10 months). ID 52958

**Boston University School of Public Health**  
BOSTON, MA  
$61,375—Study on improving the quality of care through routine, successful implementation of evidence-based practice at the bedside (1 year). ID 53955

**Brigham & Women’s Hospital Inc.**  
BOSTON, MA  
$44,982—Building a business case: quantifying hospital-based nurses’ contributions to patient safety (1 year). ID 52220

**Center for Health Design Inc.**  
CONCORD, CA  
$173,500—Developing an evidence-based design assessment and certification program for hospital design professionals (16 months). ID 53774

**Columbia University Graduate School of Business**  
NEW YORK, NY  
$226,988—Econometric analysis of the impact of nurse skill level and turnover on patient outcomes (22 months). ID 53420

**Communications Projects**  
MULTIPLE CONTRACTORS  
$24,808—National Nurse Funders Collaborative meeting (1 month). ID 51118  
$40,000—Expert meeting on best practices in hospital nursing organizational culture (4 months). ID 53260

**Georgia Tech Research Corporation**  
ATLANTA, GA  
$27,250—Conference on the impact of the hospital physical environment on health care outcomes and patient and staff satisfaction (8 months). ID 53343  
$149,988—Planning effective design tours to highlight exceptional hospital culture and physical design (1 year). ID 55899

**IDEO, Inc.**  
PALO ALTO, CA  
$59,188—Multidisciplinary scenario-building workshop on the health care delivery system of the future (9 months). ID 52200

**Institute for Family-Centered Care Inc.**  
BETHESDA, MD  
$30,000—Convening on patient-centered care (1 year). ID 56097

**Institute for Healthcare Improvement**  
CAMBRIDGE, MA  
$241,400—Innovation on the prevention of hospital falls (1 year). ID 55297

**Interdisciplinary Nursing Quality Research Initiative**  
Funding for interdisciplinary studies that address critical gaps in what we know about nursing quality and for the synthesis, translation and dissemination of results to key stakeholders.

- **Communications Project**  
  MULTIPLE CONTRACTORS  
  $50,000—Planning for the Interdisciplinary Nursing Quality Research Initiative (3 months). ID 53236

- **Constella Group, LLC**  
  DURHAM, NC  
  $35,614—Administrative support services for the Interdisciplinary Nursing Quality Research Initiative (1 year). ID 55505

- **MasiMax Resources, Inc.**  
  ROCKVILLE, MD  
  $96,086—Strategic communications support for the Interdisciplinary Nursing Quality Research Initiative (1 year). ID 55624

- **University of Pennsylvania School of Nursing**  
  PHILADELPHIA, PA  
  $321,639—Technical assistance and direction for the Interdisciplinary Nursing Quality Research Initiative (1 year). ID 55599

ROCKVILLE, MD
$150,000—Development of a handbook for nurses on patient safety and quality (9 months). ID 55842
The Public Health team seeks to strengthen America’s public health system so it is better prepared to promote health and protect all Americans from a range of threats, including infectious diseases; health problems such as obesity, tobacco use and asthma; bioterrorism; and natural disasters like the hurricanes that devastated the Gulf Coast in 2005.

This past year we focused particularly on improving the performance and accountability of state and local public health agencies. The number of states where both state and local public health agencies are engaged in systematic performance assessment and quality improvement is one indicator we use to measure our progress. As a critical step toward achieving that goal, we began to explore the development of a national voluntary accreditation system for state and local public health agencies. The Exploring Accreditation project is co-funded by the Centers for Disease Control and Prevention and is coordinated by the National Association of County and City Health Officials, the Association of State and Territorial Health Officials, the American Public Health Association, and the National Association of Local Boards of Health, in partnership with other stakeholders.

Exploring Accreditation represents an opportunity for public health leaders to consider how an accreditation system might improve the health of the communities and public they serve. A steering committee that includes representatives from local and state government public health agencies and experts in accreditation and performance standards will make definitive recommendations on the actions needed to develop a fair, reasonable, and meaningful national voluntary accreditation system for local and state public health agencies. Four workgroups will assist the steering committee and advise on key aspects of a national accreditation system. The workgroups will consider how such a system might complement existing state efforts; how federal, state and local groups would work together; models for financing; governance options; measures of system performance; and evaluation of the system. Recommendations are expected by the fall of 2006.

To complement Exploring Accreditation, the Foundation launched a competitive grant process to form a learning network collaborative to link states that already have experience in designing and implementing public health agency performance measurement or accreditation systems. Illinois, Michigan, Missouri, North Carolina and Washington are the first states to participate in the collaborative. These states will share lessons and best practices, participate in Exploring Accreditation, and work with the National Network of Public Health Institutes and the Public Health Leadership Society.
In 2006 the Public Health team will continue efforts to improve the performance and quality of public health agencies in multiple areas, including leadership, information technology, advocacy and communications. For more information about this team’s initiatives and objectives, visit www.rwjf.org/publichealth.

37 states HAVE adequate biosafety level 3 (BSL-3) laboratories that meet anticipated preparedness needs as outlined in their state’s bioterrorism preparedness plan.

13 states DO NOT HAVE adequate biosafety level 3 (BSL-3) laboratories that meet anticipated preparedness needs as outlined in their state’s bioterrorism preparedness plan. *

---

1 Laboratory Facilities, Technology, and/or Equipment.

* Illinois did not respond to the 2005 survey. Illinois reported it did not have sufficient capabilities in the 2004 Ready or Not? survey. Puerto Rico responded that it did NOT have sufficient BSL-3 capabilities.

Note: Adequate biosafety level laboratories, necessary for the safe handling and analysis of infectious agents that may cause serious or potentially lethal disease as a result of exposure through inhalation, is an example of an indicator that might be part of a larger plan to measure the performance and accountability of state and local public health agencies.

We seek to ensure that all Americans, especially those with chronic conditions, receive high-quality health care in outpatient settings. To help achieve this goal, the Quality team has been working to improve performance on nationally adopted measures of outpatient chronic care quality through local market demonstrations. The Institute of Medicine recommended that aligning multiple forces in a geographic area is the next critical step toward improving the quality of care nationally. In accord with that recommendation we want to support strategies that recognize and take advantage of market forces. Our Quality team chose a market-based approach because, if aligned and focused, the forces within a market can create a sustained drive for quality improvement.

As we recognized the lack of functioning health care markets in the United States where supply and demand drives price and quality, in 2005 the team commissioned an intensive review and comparison of health care quality improvement activities in four communities. The purpose of this work was to compare some real communities with the Foundation’s vision of what constitutes a well-functioning market to help us design and target future programming.

Before assessing the four communities, we developed a set of common criteria in order to effectively analyze and compare them. We identified eight attributes to help ascertain if a community was well-positioned to develop a functioning market: community leadership; sustainability; provider-based quality improvement activities; performance measurement; public reporting; financial incentives; health information technology and infrastructure; and consumer engagement. Using these criteria, we built a Market Readiness Matrix to help us better understand a given market’s strengths and weaknesses. We then conducted interviews with key informants in each market. Finally, we spent two days in each market meeting people and conducting group interviews.

All four communities exhibited specific strengths and weaknesses. Health information technology and infrastructure was the most undeveloped attribute across the four, followed by provider financial incentives. Community leadership was the strongest attribute. Overall the four markets scored in the “basic” or average level of readiness for quality improvement, revealing there is an opportunity for significant progress. The effort, to our knowledge the first of its kind, helps us break down the complex dynamics within these health care communities. We believe this perspective will make us better able to help communities accelerate movement toward systems that drive and sustain quality care.
The next step is to design programs that will help communities accelerate their efforts to develop markets. As we develop this programming, here are some key questions the team is considering: Why are communities slow to create markets that will drive and sustain quality health care? What can the Foundation do to help communities make these changes? Which attributes or sequence of attributes should communities develop to accelerate improvement?

In addition to this project, over the course of the next year the Quality team will continue to work toward improving the quality of care that people with chronic conditions receive in outpatient settings. Specifically, we are supporting efforts to create national and local pressure for more transparency as a way to drive quality improvement; engaging consumers and purchasers in understanding and assessing quality; and tracking progress in achieving better care, both nationally and within demonstration markets. For more information about this team’s initiatives and objectives, visit [www.rwjf.org/quality](http://www.rwjf.org/quality).

AcademyHealth
WASHINGTON, DC
$199,469—Facilitating the Foundation’s effort to actively engage consumers and consumer groups in improving health care quality (2 years).
ID 53662

Advancing Diabetes Self-Management
Program to expand and test multicomponent self-management programs that could be delivered in primary care settings and improve outcomes and cost-effectiveness.

• Fleishman-Hillard, Inc.
ST. LOUIS, MO
$30,000—Communications support for Advancing Diabetes Self-Management and Building Community Supports for Diabetes Care (1 year).
ID 52749

• Washington University in St. Louis
School of Medicine
ST. LOUIS, MO
$539,923—Communications and dissemination plan for Advancing Diabetes Self-Management (18 months).
ID 56455

• Washington University in St. Louis
School of Medicine
ST. LOUIS, MO
Technical assistance and direction for Building Community Supports for Diabetes Care and Advancing Diabetes Self-Management (1 year).
ID 50497

Allies Against Asthma: A Program to Combine Clinical and Public Health Approaches to Chronic Illness
Program to support community-based coalitions aimed at improving efforts to control pediatric asthma.

• University of Michigan
School of Public Health
ANN ARBOR, MI
$449,949—Technical assistance and direction for Allies Against Asthma (20 months).
ID 49245

$45,235—Dissemination of Allies Against Asthma activities in a supplemental theme issue of Health Promotion and Practice (1 year).
ID 52817

Center to Advance Palliative Care
Initiative to increase the number of hospitals that have the capability to provide quality palliative care; create sufficient momentum that hospital-based palliative care becomes a standard practice in comprehensive patient care; and provide leadership in the development of standards for palliative care programs.

• Mount Sinai School of Medicine
of New York University
NEW YORK, NY
$1,691,887—Technical assistance and direction for the Center to Advance Palliative Care (14 months).
ID 48403

$500,000—Transition funding for the Center to Advance Palliative Care (14 months).
ID 52964

Association of American Medical Colleges
WASHINGTON, DC
$140,978—Engaging health centers’ participation in the national Academic Chronic Care Collaborative (18 months).
ID 55278

University of California, Berkeley,
School of Public Health
BERKELEY, CA
$1,399,873—Tracking and understanding national improvements in chronic illness care (2 years).
ID 51573

Collaborative Family Health Care Coalition
ROCHESTER, NY
$5,000—Regional strategy meeting to further advance fully integrated health care services (6 months).
ID 55615

Children’s Hospice & Palliative Care Coalition
WATSONVILLE, CA
$50,000—Development of a pediatric palliative care online resource for parents (1 year).
ID 53711

Cygnus Corporation
ROCKVILLE, MD
$30,057—National conference aimed at expanding research designs to improve the science base for health care quality improvement (6 months).
ID 55369
Dana Farber Cancer Institute Inc.
BOSTON, MA
$99,848—Convening the leaders in the field to develop strategies to advance education, research and clinical practice in palliative care (4 years). ID 53976

Depression in Primary Care: Linking Clinical and System Strategies
Program designed to increase the use of effective treatment models in primary care settings for patients with depression.

• University of Pittsburgh School of Medicine
PITTSBURGH, PA
$739,409—Technical assistance and direction for Depression in Primary Care (17 months). ID 51814

Duke University Divinity School
DURHAM, NC
$267,873—Training health care providers in end-of-life care for minority populations (18 months). ID 52783

Federation of State Medical Boards of the United States Inc.
DALLAS, TX
$9,800—Support for patient participation in a national dialogue on improving physician performance in practice (5 months). ID 55705

George Washington University Center for Health Services Research and Policy
WASHINGTON, DC
$41,333—Planning for a project to assess legal barriers to using quality and disparities data (1 month). ID 51564
$599,999—Legal barriers to using quality and disparities data (22 months). ID 53340

Health e-Technologies: Building the Science of eHealth
Program to support systematic research in the evaluation of interactive e-health applications for health behavior change and chronic disease management.

• Brigham & Women’s Hospital Inc.
BOSTON, MA
$540,253—Technical assistance and direction for Health e-Technologies (1 year). ID 48413

• White Mountain Research Associates, L.L.C.
DANBURY, NH
$59,374—Assessing the role of Health e-Technologies in advancing the future of e-health (11 months). ID 56232

Improving Asthma Care for Children
Program to improve the management of asthma for children covered by Medicaid and the State Children’s Health Insurance Program.

• Steege/Thomson Communications, Inc.
PHILADELPHIA, PA
$69,700—Strategic communications for the Pediatric Asthma Initiative (6 months). ID 46062

Improving Chronic Illness Care
Program to help health care organizations redesign care to improve the clinical and functional outcomes of patients with chronic illness.

Program Sites

• Medical College of Wisconsin Inc.
MILWAUKEE, WI
$260,554—Study of community-based care by parent mentors of children with asthma (2 years). ID 52816

Other Program Activities

NEWTON, MA
$99,634—Research to strengthen health care quality improvement evaluation and practice (6 months). ID 52931

University of Wisconsin
School of Medicine and Public Health
MADISON, WI
$54,500—Measurement tools for exploring the impact of the ambulatory care workplace on quality of care in chronic disease (1 year). ID 53017
Smoking remains among the most pressing threats to America's health, and the Foundation is committed to saving lives by reducing tobacco use and exposure. In pursuit of that goal, the Tobacco team is focused on advancing and sustaining policy changes that have been shown to prevent and reduce tobacco use and exposure to secondhand smoke and to help addicted smokers quit. The number of Americans protected by law from the dangers of secondhand smoke is one indicator we use to measure our progress.

Currently an estimated 27 percent of Americans are covered by comprehensive clean indoor air or “smoke-free” laws—those providing full workplace protections without exemptions, including bars and restaurants. In November 2005, Washington became the ninth state to enact a comprehensive statewide smoke-free law, joining California, Connecticut, Delaware, Maine, Massachusetts, New York, Rhode Island and Vermont. Hundreds of cities and counties have taken action as well, as have entire nations including Ireland, Norway, Sweden, Italy and New Zealand. Cumulatively, this represents significant progress toward eliminating a major threat to the public’s health, but more needs to be done. Secondhand smoke contains more than 4,000 chemicals and at least 69 carcinogens. It is a proven cause of lung cancer, chronic lung ailments such as bronchitis and asthma, low-weight births, and sudden infant death syndrome. And it is responsible for 38,000 deaths each year in the United States, according to the Centers for Disease Control and Prevention (CDC).

Recent studies using hospital admissions data in Pueblo, Colo. and Helena, Mont., found that the number of heart attacks declined 27 percent and 40 percent, respectively, after each city implemented a smoke-free workplace law, including restaurants and bars. Other studies have found that exposure to secondhand smoke increases the risk of heart disease among nonsmokers by as much as 60 percent and that as little as 30 minutes of exposure to secondhand smoke can trigger changes that increase the risk of a heart attack. Because of these risks from even short-term exposure to secondhand smoke, the CDC in April 2004 advised the 64 million Americans with cardiovascular disease to avoid indoor settings where smoking is allowed.

The evidence is also clear that smoke-free laws protect health without harming business. Dozens of economic impact and employment studies have shown that smoke-free laws do not harm sales or employment in restaurants or bars and may even have a positive impact. An April 2005 study by the Harvard School of Public Health found that Massachusetts’ smoke-free law did not affect sales or employment in the state’s restaurants, bars and nightclubs after taking effect on July 5, 2004. Some of the strongest evidence comes from New York City, where, in the year after the city’s smoke-free law took effect in 2003, business receipts for restaurants and bars increased, employment rose, virtually all establishments were complying with the law, and the vast majority of New Yorkers supported the law.
There is growing evidence that clean indoor air laws increase smokers’ motivation and attempts to quit. Coinciding with the implementation of New York City’s law, telephone quitline counseling and free nicotine patches were offered to smokers wanting to quit, triggering more than 400,000 calls to the quitline in three days. Combined, these policies and interventions have produced a 15 percent drop in adult smoking rates between 2002 and 2004, resulting in 188,000 fewer smokers.

We seek to have at least 35 percent of the total U.S. population protected from secondhand smoke by April 2006. The Tobacco team will use integrated strategies to help achieve this goal, including: (1) research, including tracking and analyses of policies that affect tobacco use and exposure, (2) advocacy grants and technical assistance to states and communities, and (3) communications, including public education advertising, media relations, polling and message research, policy briefs, and news and information services to advance the public’s understanding of research findings and support of advocacy efforts. For more information about this team’s initiatives and objectives, visit www.rwjf.org/tobacco.

**Municipalities with Local 100 Percent Smoke-Free Clean Indoor Air Laws**

* Includes all municipalities with ordinances or regulations that do not allow smoking in attached bars or separately ventilated rooms and do not have size exemptions. Includes ordinances effective for any part of the year, i.e., if an ordinance was effective for the first half of 2001 but then repealed halfway through the year, that ordinance still gets counted in 2001 since it was in effect for part of the year.

** Year to Date, January 3, 2006.

1 Includes both public and private non-hospitality workplaces, including, but not limited to, offices, factories and warehouses.

2 Includes any attached bar in the restaurant.

## TOBACCO USE AND EXPOSURE
### 2005 GRANTS AND CONTRACTS

**Academy for Educational Development Inc.**
WASHINGTON, DC
$163,344—Promoting multifunder collaboration to put evidence-based tobacco cessation into practice (7 months). ID 55732

**Addressing Tobacco in Health Care**
Initiative intended to integrate effective tobacco treatment as part of basic health care.

- **University of Wisconsin**
  School of Medicine and Public Health
  MADISON, WI
  $400,000—Network to sustain and expand tobacco-related health care policy and systems change (2 years). ID 48283

national clinical guideline for treating tobacco use
and dependence (18 months). ID 55358
HUMAN CAPITAL PORTFOLIO UPDATE

A strong, capable and diverse health care workforce is necessary to improve the health and health care of all Americans. Thus, we support programs in leadership development, training and research for a diverse group of promising scholars and leaders; investments to build specific fields within health and health care; and other initiatives to help ensure our nation has a sufficient, well-trained workforce providing direct care and services to patients.

As our nation’s population becomes increasingly diverse, the goals of the Human Capital Portfolio are to increase the diversity of applicants and participants in the Foundation’s fellowship and scholarship programs, and to increase the diversity of the health and health care workforce in the United States.

In 2005 the Foundation began developing a plan to increase the diversity of people applying to our fellowship and scholarship programs. Our first step was to develop a better understanding of the racial, ethnic, gender, geographic and economic diversity of our programs’ applicants and participants. Working with a marketing and communications consultant, the Foundation interviewed the leaders of seven of its fellowship and scholarship programs to assess their perceptions of their candidate pools, applicants, fellows and scholars, and to understand the effectiveness of existing efforts to increase the diversity of program participants.

Using the data and information collected during this assessment phase, our next step is to develop and implement marketing and outreach strategies to attract a more robust and diverse applicant pool for our fellowship and scholarship programs. We are firmly committed to improving the diversity in these programs and in the nation’s health and health care professions.

In the short term, we plan to track the number of underrepresented minorities applying to and participating in RWJF fellowship and scholarship programs. Most programs had been collecting demographic data, on a voluntary basis, through fellowship and scholarship applications, but there is currently no common definition of diversity across programs or standardization of questions about candidate demographics. Evidence shows that the demographics of health care professionals are far less diverse than those of the general population. One challenge to increasing diversity among our fellows and scholars is a lack of diversity within the pipeline of students who will be tomorrow’s physicians, nurses, dentists, and health and health care leaders. The Foundation is addressing this issue through our Summer Medical and Dental Education Program, which encourages college students from underrepresented groups to pursue careers in medicine and dentistry.
Moving beyond RWJF’s programs, we plan to identify and track the percentage of students in medical, dental and osteopathic schools who are underrepresented minorities, as well as the percentage of underrepresented minorities in key U.S. health and health care leadership positions. Although we recognize that it will take many years, we hope and expect that, in our lifetime, the diversity of health and health care leaders will more closely match the diversity of the nation.

In addition to our commitment to increasing the diversity of the health and health care workforce, RWJF has a long history of improving health and health care policy and leadership, and has supported education and training to build specific fields in health care—dentistry, public health, and social sciences, for example. We are developing new programs to build and strengthen the front-line health care workforce—social workers, home health aides, addiction counselors and nursing assistants—who provide regular care and services to patients. For more information about this portfolio’s initiatives and objectives, visit www.rwjf.org/humancapital.
HUMAN CAPITAL
2005 GRANTS AND CONTRACTS

The Arnold Gold Foundation
ENGLEWOOD, NJ
$1,000,000—Sustaining the Gold Humanism Honor Society which promotes humanistic values in medicine (1 year). ID 53284

Association of American Medical Colleges
WASHINGTON, DC
$277,353—The David E. Rogers Award honoring medical school faculty who made major contributions to improving the health and health care of Americans (10 years). ID 39873

Association of Public Health Laboratories Inc.
WASHINGTON, DC
$210,828—Strategic planning for the public health laboratory leadership workforce (1 year). ID 55610

Better Jobs, Better Care: Building a Strong Long-Term Care Workforce
A demonstration, research and evaluation initiative to create changes in policy and practice that will lead to the recruitment and retention of high-quality direct care workers in both nursing homes and home- and community-based settings.

Program Sites
- Benjamin Rose Institute,
  Margaret Blenkner Research Institute
  CLEVELAND, OH
  $31,910—Impact of job preparation, ongoing education and training on job satisfaction and commitment among front-line workers and their supervisors (3 months). ID 56056

Other Program Activities
- American Association of Homes and Services for the Aging
  WASHINGTON, DC
  $694,060—Technical assistance and direction for Better Jobs, Better Care (16 months). ID 48422

VULNERABLE POPULATIONS PORTFOLIO UPDATE

Through the Vulnerable Populations Portfolio, the Foundation supports programs at the community level that directly touch people’s lives. If we expect to improve the health status of the most vulnerable Americans, we need to acknowledge that social factors like inadequate housing, poor education, violence and poverty contribute to poor health. Therefore, we seek to support promising efforts that address and link social factors and health status.

In 2005 we initiated several such programs employing novel approaches that connect health and social factors to improve health. Sports4Kids uses play to promote physical activity and youth development in schools. Children in low-income neighborhoods experience poor health outcomes and social problems that are exacerbated by the lack of safe places to play, and these children often come to school not knowing how to play. Sports4Kids places trained staff in schools to promote physical activity and learning through play. Sports4Kids currently operates in 75 elementary and middle schools in Oakland, San Francisco and Baltimore, reaching 32,000 students. With RWJF support, the program is expanding to three additional cities.

Indeed, children who live in low-income communities are particularly vulnerable to the social factors that influence health. RWJF recently joined with W.K. Kellogg Foundation and Atlantic Philanthropies to support an expansion of the Family Advocacy program to 30 new sites across the United States. Based at Boston Medical Center, Family Advocacy addresses the intersection of health and social factors through a partnership between the medical and legal professions. A team of full-time paid legal advisers work in tandem with pediatricians, who are often the first to discover a family with inadequate nutrition, housing or health coverage, or to hear about landlords who refuse to fix dangerous dwellings. These kinds of challenges—such as a leaky pipe that leads to a moldy carpet, which triggers a child’s asthma—are often at the root of poor health status for vulnerable families. This program makes it possible for pediatricians to identify these health-related concerns and connect families with staff who can advocate on their behalf. A member of the Family Advocacy legal staff will call landlords to remind them of their legal obligation to maintain their properties, thus leading to the needed repairs. The Boston Medical Center has used this model for more than 12 years and has helped more than 4,000 families.

Seniors are also among America’s most vulnerable populations. The Green House Project represents a higher-quality alternative to institutional skilled nursing care. Green Houses are small, self-contained homes for elders with substantial disabilities that operate under a state skilled nursing home license. They represent a radical departure from traditional nursing home practices and environments. Each element of the operation and design is crafted to change skilled long-term-care practices to return control, dignity, and a sense of
well-being to residents and direct care staff. Under a previous grant, the Foundation helped to demonstrate the Green House model—now up and running in Tupelo, Miss. The Green House Project is designed to jump-start development of more than 100 Green Houses nationally. It is our hope that there will be a Green House in every state by 2010.

New immigrants and their families—particularly children—face multiple challenges of acculturation that affect their health and well-being, including their mental health. Through the Center for Health and Health Care in Schools, we provided support to 15 communities to establish school-connected mental health services for students that will help them overcome the cultural and language barriers faced by children of immigrant and refugee families.

The issues we seek to address are broad, complex and deeply entrenched. As we look ahead to 2006, we are developing programs that will help communities address some of the public health challenges of prisoners who rejoin society after incarceration. We will also consider the health and social needs of children who are aging out of the foster care system, and maintain our focus on the needs of new immigrants and refugees. Through a new “Fresh Ideas Fund” we will continue to seek novel community-level approaches that work at this intersection of health and social factors. For more information about this portfolio’s initiatives and objectives, visit www.rwjf.org/vulnerable.
After School: Connecting Children at Risk With Responsible Adults to Help Reduce Youth Substance Abuse and Other Health-Compromising Behaviors

Program to support a three-city demonstration project designed to connect at-risk urban youth with responsible adults in activities after school.

ID 56181
The Pioneer Portfolio supports innovative projects that can lead to fundamental breakthroughs in the health and health care of Americans. We seek to invest in high-return ideas that could have major impact in the future, even though the probability that projects will lead to such breakthroughs is uncertain. To better manage this unpredictability, we are establishing mechanisms for systematically understanding future trends and forecasting their effects on health and health care.

In 2005 the Pioneer Portfolio pursued this objective through a mix of projects aimed at helping us think more precisely about the trends and strategies that may define the future of health and health care. Global Business Network, a strategy consultancy, began to lead Foundation staff through a scenario-planning process to envision a range of conceivable futures to improve the quality of today’s decisions. This exercise highlights key opportunities and partners that will allow us to navigate evolving landscapes, make informed predictions, and promote innovations to spur breakthrough change in health and health care. By improving our ability to recognize which scenarios are likely and where new ground should be broken, we will target our investments and keep them aligned with where the field is headed.

This scenario-mapping process complemented efforts to broaden our networks of innovators and experts. The Institute for the Future (IFTF) helped us scan the fields, disciplines and information networks where leading-edge ideas may emerge. IFTF will generate an innovation map, spotlighting “hot zones” of new developments that could trigger big changes. Ultimately, we will stage a futures conference that challenges leading thinkers and innovators to envision transformative solutions to today’s health and health care problems—and those we will face in coming years.

Charting the future can help us identify and support projects in the near term that can have a positive influence on longer-term scenarios. For instance, we expect that information technology will infuse nearly all dimensions of health care over the next decade. How health IT is developed and deployed, however, will make all the difference for patients. That is why it makes sense for the Foundation to invest in this arena now to help shape future possibilities. Through Connecting for Health, an RWJF–Markle Foundation collaborative of more than 100 public and private organizations, we continued to organize a nationwide health information exchange built on common standards that will allow patients, doctors, hospitals and others to communicate instantly, using a range of technologies. Several models for a nationwide system are being proposed to support faster, more accurate transfers of records among nodes in the system (e.g., from physician offices to emergency rooms to insurers). Connecting for Health pursues this goal while uniquely placing patient needs and...
outcomes front and center. It aims to influence the future of health and technology to empower individuals to actively manage their health while ensuring that their data privacy and security are protected.

The Pioneer Portfolio also supported the work of Ramanan Laxminarayan, Ph.D., of Resources for the Future, to improve health care by reorienting future approaches to managing antibiotics. Laxminarayan sees a looming crisis tied to the rise in antibiotic-resistant infections, which kill an estimated 40,000 Americans annually in hospitals alone. He expects that this toll could decline substantially if health care and policy leaders stopped treating this as a medical challenge (i.e., encouraging physicians to prescribe fewer antibiotics) and instead applied economics-based approaches (i.e., recognize that hospitals, insurers, physicians and pharmaceutical firms lack incentives to combat drug resistance). Laxminarayan’s research suggests that a supply of potent antibiotics should be developed to maximize long-term benefit, akin to natural resources such as fisheries that can become depleted without proper management. The Pioneer Portfolio is supporting Laxminarayan and a world-class team of advisers to explore the policy implications of applying this approach to antibiotics management and preventing drug-resistant illness in the future.

Our immediate focus is to develop a strategic approach that will attract new ideas and breakthrough innovations. Our longer-term objective is to assess and steer our investments toward projects that are most likely to result in breakthrough advances in health and health care. For more information about this portfolio’s initiatives and objectives, visit www.rwjf.org/pioneer.
